

## INSECT PEST MANAGEMENT IN VIRGINIA COTTON, PEANUT, SOYBEAN, AND SORGHUM

2013

D. Ames Herbert, Jr., Extension Entomologist, Virginia Tech

*Examining sorghum for lep larvae*

### Technical Support:

Mike Arrington, Research Specialist, Virginia Tech  
Cameron Blank, Graduate Student, Virginia Tech  
Carson Daughtrey, Agricultural Technician, Virginia Tech  
Jamie Hogue, Agricultural Technician, Virginia Tech  
Collin Hoy, Agricultural Technician, Virginia Tech  
Rebecca McGrath, Agricultural Technician, Virginia Tech  
Ed Seymore, Agricultural Technician, Virginia Tech  
Joshua Shaffer, Agricultural Technician, Virginia Tech  
Rebecca Whalen, Graduate Student, Virginia Tech  
John Xenakis, Agricultural Technician, Virginia Tech  
Sean Malone, Research Specialist, Virginia Tech

## ACKNOWLEDGMENTS

The authors wish to thank the many cooperators and contributors for their help and support in conducting numerous 2013 field tests and demonstrations. Appreciation is extended to Allen Harper, Director, and Bobby Ashburn, Farm Manager of the Tidewater AREC, for their help in implementing field tests. Thanks to the many other Extension specialists, Agents, producers, state commodity groups, Ag-Industry personnel, and cooperating commercial companies listed below.

## PRODUCERS

Thanks to the many producers across the region that helped the program by allowing us to conduct field tests and/or sample insects on their farms. Without their cooperation, this program would have less scope and meaning to other farmers. Special thanks to:

Edward S. Drake, Southampton Co.

Steven and Michael Pittman, Surry Co.

Henry Goodrich, Surry Co.

Bob Rogers, Sussex Co.

Mike Grizzard, Southampton Co.

Jason Hodges, Southampton Co.

Thanks to the producers who assisted Virginia Cooperative Extension and Virginia Tech personnel in the operation of black light traps. This includes:

Charles Carter, Charles City Co.

Jason Benton, Middlesex Co.

Frank Williams, Chesapeake

George & Randy Gregory, New Kent Co.

Edward Baskerville, Dinwiddie Co.

D.M. Wells, Prince George Co.

Ray Clarke, Dinwiddie Co.

Steve Rosbicki, Prince George Co.

Charles Rich, Gloucester Co.

James Hanzlik & Son, Sussex Co.

## UNIVERSITY FACULTY AND STAFF

### Virginia Polytechnic Institute and State University

Maria Balota, Crop Physiologist, Tidewater AREC, Suffolk, VA

Hunter Frame, Field Crops Agronomist, Tidewater AREC, Suffolk, VA

David Holshouser, Soybean Specialist, Tidewater AREC, Suffolk, VA

James Jenrette, Research Assistant, Eastern Shore AREC, Painter, VA

David Norton, Agricultural Specialist, Southern Piedmont AREC, Blackstone, VA

Patrick Phipps, Plant Pathologist, Tidewater AREC, Suffolk, VA

Thomas Kuhar, Entomologist, Dept. of Entomology, Blacksburg, VA

Hillary Mehl, Plant Pathologist, Tidewater AREC, Suffolk, VA

Robert Pitman, Director, Eastern Virginia AREC, Warsaw, VA

Mary Beahm, Agricultural Specialist, Eastern Virginia AREC, Warsaw, VA

Pete Schultz, Director/Entomologist, Hampton Roads AREC, Virginia Beach, VA

Hélène Doughty, Senior Research Specialist, Hampton Roads AREC, Virginia Beach, VA

### Mississippi State University

Fred Musser, Entomologist, Dept. of Entomology, Mississippi State, MS

**North Carolina State University**

Jack Bachelor, Entomologist, Dept. of Entomology, Raleigh, NC  
Dan Mott, Research Specialist, Dept. of Entomology, Raleigh, NC  
Dominic Reisig, Entomologist, Dept. of Entomology, Plymouth, NC

**Penn State University**

Shelby Fleischer, Entomologist, Dept. of Entomology, University Park, PA

**University of Delaware**

Joanne Whalen, Entomologist, Newark, DE

**University of Maryland**

Galen Dively, Entomologist, College Park, MD

**Virginia State University**

Mark Kraemer, Entomologist, Dept. of Entomology, Petersburg, VA

**VIRGINIA COOPERATIVE EXTENSION**

Laura Siegle, Amelia Co.	David Moore, Middlesex Co.
Mike Broaddus, Caroline Co.	John Allison, New Kent Co.
Robert Jones, Charlotte Co.	Haley McCann, Nottoway
Watson Lawrence, Chesapeake	Scott Reiter, Prince George Co.
Mike Parrish, Dinwiddie Co.	Robbie Longest, Richmond Co.
Keith Balderson, Essex Co.	Robert Clark, Shenandoah Co.
Rachel Grosse, Goochland Co.	Neil Clark, Southampton Co.
Brittany Council, Greensville Co.	Chris Drake, Southampton Co.
Jim Schroering, Hanover Co.	Marcus Williams, Suffolk
Janet Spencer, Isle of Wight Co.	Glenn Slade, Surry Co.
Laura Maxey, King William Co.	Kelvin Wells, Sussex Co.
Lindy Tucker, Lunenburg Co.	Roy Flanagan, Virginia Beach
Haley McCann, Nottoway Co.	Stephanie Romelczyk, Westmoreland Co.
Taylor Clarke, Mecklenburg Co.	

**COMMODITY GROUPS**

Cotton Incorporated  
Cotton Foundation  
National Peanut Board  
United Soybean Board  
Virginia Agricultural Council  
Virginia Cotton Board  
Virginia Peanut Board  
Virginia Soybean Board  
Virginia State Cotton Support Committee

**INDEPENDENT CROP CONSULTANTS**

Chad Harrell, Hertford Co., NC

Stan Winslow, Matt Winslow, and Dale Weeks, Tidewater Agronomics, Inc., Camden, NC

**COOPERATING COMPANIES**

AMVAC Chemical Corporation, Los Angeles, CA

BASF Ag Products, Research Triangle Park, NC

Bayer CropScience, Research Triangle Park, NC

Dow AgroSciences, Indianapolis, IN

E.I. DuPont de Nemours and Company, Wilmington, DE

FMC Corporation, Philadelphia, PA

Monsanto Agricultural Company, St. Louis, MO

Seed Source Genetics, Bishop, TX

Syngenta Crop Protection, Inc., Greensboro, NC

Valent U.S.A. Corporation, Walnut Creek, CA

## **Insect Rating Scales Used in Efficacy Trials and Abbreviations Used in this Publication**

### **Thrips injury rating scale for cotton:**

- 0 = no injury
- 1 = 10% injured leaves, no bud injury
- 2 = 25% injured leaves, no bud injury
- 3 = 75% injured leaves, 0-25% buds injured
- 4 = 90% injured leaves, >25% buds injured
- 5 = dead plants

### **Thrips injury rating scale for peanut:**

- 0 = no injury
- 1 = 10% leaves injured
- 2 = 20% leaves injured
- 3 = 30% leaves injured
- 4 = 40% leaves injured
- 5 =  $\geq 50\%$  leaves injured +  $\leq 5\%$  terminal buds injured
- 6 =  $\geq 50\%$  leaves injured + 25% terminal buds injured
- 7 =  $\geq 50\%$  leaves injured + 50% terminal buds injured
- 8 =  $\geq 50\%$  leaves injured + 75% terminal buds injured
- 9 =  $\geq 50\%$  leaves injured + 90% terminal buds injured
- 10 = dead plants

### **Abbreviations used in this publication:**

- 1<sup>st</sup> tl: first true leaf
- ai: active ingredient
- BC: broadcast
- BMSB: brown marmorated stink bug
- cotyl: cotyledon
- cwt: hundred-weight
- GC: ground-cracking
- IF: in-furrow
- RCBD: randomized complete block design
- Tidewater AREC: Tidewater Agricultural Research and Extension Center

## Contents

Acknowledgments.....	2
Insect Rating Scales Used in Efficacy Trials and Abbreviations Used in this Publication .....	5
Climatological Summary of the 2013 Growing Season—Tidewater AREC, Suffolk, VA.....	8
Table 3. Soil types, nutrient analyses (ppm), and pH for tests conducted in 2013— Tidewater AREC, Suffolk, VA. ....	12

### **Cotton Insect Pest Management Tests and Demonstrations**

Test: CT13-THP-REGIONAL-1, Evaluation of efficacy of liquid in-furrow insecticide treatments alone and in combination with insecticide seed treatments (Objective 4A).....	14
Test: CT13-THP-REGIONAL-2, Evaluation of thrips management programs with and without pre-emergent herbicides .....	21
Test: CT13-THP-REGIONAL-3, Evaluation of efficacy of insecticide seed treatments alone and in combination with foliar applied insecticides for managing thrips on seedling cotton (Objective 4B).....	27
Test: CT13-THP-REGIONAL-4, On-farm evaluation of the effects of tillage system (conventional, strip tillage, or no tillage) and application of acephate at first true leaf on immature thrips populations separately under irrigated and dryland conditions .....	33
Test: CT13-THP-SEED-TRT-1, Evaluation of seed treatments for thrips management in cotton .....	36
Test: CT13-THP-SEED-TRT-3, Evaluation of seed and in-furrow treatments for thrips management in cotton .....	40
Test: CT13-THP-SEED-TRT-4, Evaluation of seed treatments for thrips management in cotton .....	43
Test: CT13-THP-SEED-TRT-5, Evaluation of Aeris seed treatment plus multiple Admire Pro rates for thrips management in cotton .....	52
Test: CT13-THP-FOLIAR-1, Evaluation of selected foliar insecticides for thrips management in cotton .....	55
Test: CT13-BW-1-Variety, Value of bollworm sprays on double-gene insect-resistant cotton varieties .....	58
Test: CT13-BW-2, Value of bollworm sprays on conventional cotton varieties .....	62
Test: CT13-BW-3GeneBt, Efficacy of 3-gene Bt cotton against lepidopteran pests .....	66
Test: CT13-BW-4-TWINLINK, Agronomic effects and insecticidal efficacy of TwinLink Plus insect resistant (IR) cotton.....	70
Test: CT13-LEP-FOLIAR, Evaluation of selected insecticides for lepidopteran pest management in cotton .....	75
Test: CT13-SBUG-1, Evaluation of selected insecticides for stink bug management in cotton .....	78
Test: CT13-SBUG-2, Evaluation of selected insecticides for stink bug management in cotton .....	81
Test: CT13-SBUG-3, Evaluation of multiple applications of a pyrethroid insecticide for stink bug management in cotton.....	84

**Peanut Insect Pest Management Tests and Demonstrations**

Test: PT13-THP-1, Evaluation of in-furrow granular and foliar at-ground-cracking insecticides for thrips management in peanut .....88

Test: PT13-THP-2, Evaluation of seed treatments and in-furrow granular insecticides for thrips management in peanut.....94

Test: PT13-THP-3, Influence of granular in-furrow insecticide on peanut cultivars for thrips management .....101

Test: PT13-THP-4, Evaluation of at-planting, liquid in-furrow insecticides for thrips management in peanut.....106

Test: PT13-THP-5, Evaluation of at-planting, liquid and granular in-furrow insecticides; seed treatments; and foliar broadcasts for thrips management in peanut.....110

Test: PT13-THP-SCR, Belay for thrips and rootworm management in peanut .....114

Test: PT13-THP-REGIONAL-VA, Multi-state evaluation of a seed treatment and in-furrow granular insecticide for thrips management in virginia-type peanut .....118

Test: PT13-THP-REGIONAL-RUNNER, Multi-state evaluation of a seed treatment and in-furrow granular insecticide for thrips management in runner-type peanut.....124

Test: PT13-SCR-1, Belay for rootworm management in peanut.....130

Test: PT13-SCR-2, On-farm assessment of Belay for rootworm management in peanut.....133

**Soybean Insect Pest Management Tests and Demonstrations**

Test: SB13-TCAH-1, Evaluation of selected seed treatment and foliar insecticides for threecornered alfalfa hopper and kudzu bug management in soybean.....137

**Sorghum Insect Pest Management Tests and Demonstrations**

Test: SORGHUM-13-LEP-1, Evaluation of selected insecticides for lepidopteran pest management in ‘DKS38-88’ sorghum .....141

Test: SORGHUM-13-LEP-2, Evaluation of selected insecticides for lepidopteran pest management in ‘DKS54-00’ sorghum .....145

Corn earworm survey of field corn in Virginia, 2013 .....149

Table 80. Average nightly number of corn earworm moths captured in eastern Virginia black light traps, 2013 season.....151

Table 81. Average nightly number of brown marmorated stink bug (BMSB) captured in eastern Virginia black light traps, 2013 season. ....152

## **Cotton Insect Pest Management Tests and Demonstrations**

**Test: CT13-THP-REGIONAL-1, Evaluation of efficacy of liquid in-furrow insecticide treatments alone and in combination with insecticide seed treatments (Objective 4A)**

#	Material(s)	Rate	Application details
1	Orthene 97	16 oz/A	Liquid in-furrow
2	Avicta Complete + Orthene 97	Seed treatment 8 oz/A	--- Liquid in-furrow
3	Admire Pro 4.6F	9 oz/A	Liquid in-furrow
4	Avicta Complete + Admire Pro 4.6F	Seed treatment 7.4 oz/A	--- Liquid in-furrow
5	Avicta Complete	Seed treatment	---
6	Aeris + Trilex Advanced	Seed treatment	---
7	Aeris + Trilex Advanced + Admire Pro 4.6F	Seed treatment 7.4 oz/A	--- Liquid in-furrow
8	Aeris + Trilex Advanced + Poncho/VOTiVO	Seed treatment	---
9	Temik 15G	5 lb/A	Granular in-furrow
10	Velum Total	14 oz/A	Liquid in-furrow
11	UTC, fungicide	---	---

Aeris is a mixture of Gaucho Grande 5FS at 0.375 mg ai/seed and thiodicarb at 0.375 mg ai seed. Avicta Complete Cotton is a mixture of Avicta 500FS at 0.15 mg ai/seed, Cruiser 5FS at 0.34 mg ai/seed, and Dynasty CST 125FS at 0.03 mg ai/seed.

Poncho/VOTiVO is a mixture of 4.17 lb clothianidin and 0.84 lb *Bacillus firmus* per gallon

<b>Test:</b> CT13-THP-REGIONAL-1

Means within a column followed by the same letter(s) are not significantly different (Protected LSD,  $P=0.05$ ).

<sup>1</sup>Based on counting all living plants per row (two 35-ft rows were sampled per plot). Planting date was May 9.

<sup>2</sup>Thrips injury based on a 0-5 scale, 0 = no injury and 5 = dead plants.

<sup>3</sup>Earliness ratings based on the number of nodes between the uppermost cracked boll and the uppermost harvestable boll. Twenty plants were sampled per plot.

<sup>4</sup>Cotton was harvested on November 4. Gross yields were reduced by 60.88% to account for seed and trash.

**Table 26. Mean number of thrips per 5 plants, collected from the guard rows of treatment 1, CT13-THP-SEED-TRT-3. Tidewater AREC, Suffolk, VA, 2013.**

13	ST 5288 B2RF	Aug 14
14	DP 174 RF	Aug 8 and Aug 14
15	SSG UA 222	Aug 8 and Aug 14

Each variety was treated with insecticides targeting bollworm, or untreated. In the treated plots, double-gene insect resistant varieties (treatments 1-13) received one spray (Brigade @ 6.4 oz/A plus Belt @ 2 oz/A) at 6 days after egg threshold. Conventional varieties (treatments 14-15) received two sprays for bollworm (Brigade @ 6.4 oz/A at egg threshold on Aug 8, and then at 6 days after egg threshold received Brigade @ 6.4 oz/A plus Belt @ 2 oz/A). All seed was insecticide-treated with imidacloprid or thiamethoxam.

**Test: CT13-BW-2, Value of bollworm sprays on conventional cotton varieties**

#	Variety	Date(s) treated for “Bollworm Protected” plots
1	SSG HQ 110 CT	Aug 8 and Aug 14
2	SSG HQ 210 CT	Aug 8 and Aug 14
3	SSG CT Linwood	Aug 8 and Aug 14
4	SSG UA 222	Aug 8 and Aug 14
5	Americot UA 48	Aug 8 and Aug 14

Each variety was treated with insecticides targeting bollworm, or untreated. In the treated plots, conventional varieties (treatments 1-5) received two sprays for bollworm (Brigade @ 6.4 oz/A at egg threshold on Aug 8, and then at 6 days after egg threshold received Brigade @ 6.4 oz/A plus Belt @ 2 oz/A). All seed was insecticide-treated with imidacloprid or thiamethoxam.

## Corn earworm survey of field corn in Virginia, 2013

Annually, we conduct a survey to estimate *Helicoverpa zea* (corn earworm) infestation levels in field corn in mid- to late July. Corn is considered a nursery crop for earworm, allowing the pest to complete a lifecycle and then move on to other crops such as soybean, cotton, and peanut in August. Over 30 years of data show that there is a linear correlation between the infestation level in corn and the amount of soybean acreage that gets treated with insecticide for this pest.

To conduct the survey this year, the number of corn earworms found in 50 ears of corn was recorded in 5 corn fields in each of 30 counties, totaling 7,500 ears and 150 fields sampled. When fields were known to contain Bt or non-Bt corn, this was noted. Otherwise, samples were considered to be random and assumed to be representative of the actual Bt/non-Bt composition in each county. Age of earworms, or if they had already exited the ears, was also recorded (data not shown). We greatly appreciate the help of Virginia Cooperative Extension Agriculture and Natural Resource (ANR) Agents, Virginia Tech faculty and staff, and volunteers in this effort. These cooperators are acknowledged below. We also would like to thank the many growers who graciously allowed us to inspect their fields for earworm.

Results of the survey are provided in the attached table. Statewide, approximately 18% of ears were infested with earworms. For comparison, 30% of ears were infested in 2012, 33% of ears were infested in 2011; 40% in 2010; and 36% in 2009. Regional averages for 2013 were 9.2% infested ears in the Northern Neck, 15.1% in Mid-Eastern, 20.2% in South-Central, 23.4% in the Southeast, and 16.2% on the Eastern Shore.

This survey is intended to be a representative sample, not a complete picture. We always recommend scouting individual fields to determine exactly what is happening in terms of corn earworm as well as other pests and crop problems. Also, please check the black light trap data on the [Virginia Ag Pest Advisory](#) and other reports posted weekly to keep up-to-date on the insect pest situation.

### Acknowledgments for the 2013 Virginia field corn survey
