

## VIRGINIA CORN HYBRID AND MANAGEMENT TRIALS IN 2017

### Coordinators of Virginia Corn Hybrid Trials in 2017

Wade Thomason, Extension Specialist, Department of Crop and Soil Environmental Sciences, Virginia Tech  
Harry Behl, Research Specialist Senior, Department of Crop and Soil Environmental Sciences, Virginia Tech  
Elizabeth Rucker, Research Associate, Department of Crop and Soil Environmental Sciences, Virginia Tech

#### Other contributors:

Phillip Browning, Manager, Virginia Crop Improvement Association Foundation Seed Farm  
Doug Horn, Extension Agent, Rockingham County  
Karl Jones, Agricultural Manager Senior, Tidewater Agricultural Research and Extension Center  
Ned Jones, Farm Manager, Southern Piedmont Agricultural Research and Extension Center  
Brad Lael, Farm Manager, Northern Piedmont Center  
Jon Wooge, Agricultural Program Coordinator, College Farm, Virginia Tech

### Companies Participating in the 2017 Corn Hybrid Trials

Company	Brand	Address
Augusta Seed Crop Production Services	Augusta Seed Dyna-Gro	PO Box 899, Verona, VA 24482 15277 Richmond Tappahannock Hwy, St. Stephens Church, VA 23148-0409
Doebler's PA Hybrids, Inc.	RPM® Williamsport, PA 17701	1000 Commerce Park Dr. Suite 106, Williamsport, PA 17701
Dupont Pioneer Erwin-Keith, Inc. Mid-Atlantic Seeds Monsanto	Pioneer Progeny Ag Products Mid-Atlantic Channel, DEKALB, Hubner	425 Abbeydale Way, Columbia, SC 29229 1529 Hwy 193, Wynne, AR 72396 204 St. Charles Way #163E, York, PA 17402 800 N Lindbergh Blvd., St Louis, MO 63167

## Background Information

Performance trials of commercial corn hybrids were conducted at six locations in Virginia in 2017. The Mt. Holly location consisted of both an irrigated and non-irrigated test. All but two locations were planted with a Wintersteiger PlotKing 2600. Blackstone and Holland were planted with an Almaco 2-row cone planter. All locations were harvested with a Massey-Ferguson 8XP plot combine. Yields have been adjusted to 15.5% moisture. Grain test weight, moisture, and plot grain weights were measured with a GrainGauge® manufactured by HarvestMaster. A list of companies participating in the trials is provided before the table of contents. All hybrids entered in the Virginia trials are those submitted by commercial companies. The locations at which particular hybrids were entered were specified by the company. Companies entering hybrids were charged a fee for each hybrid per location to support the Virginia Corn Hybrid and Management Trials.

## Yield Differences

Experimental plots vary in yield and other measurements due to location in the field and other factors which cannot be controlled. Statistics given in the tables are intended to help the reader make valid comparisons between hybrids. The magnitude of differences which may have been due to uncontrollable variation has been computed for the data and listed at the bottom of columns as the LSD (.05) (least significant difference with 95% confidence). Differences less than the LSD are assumed not to be real differences with 95% confidence.

## Understanding Relative Yield

Companies entering hybrids decide which hybrids are planted at which locations. Combining and comparing absolute yield and other results from multiple sites is inappropriate when not all hybrids are planted at all locations. For example, one hybrid might have an unfair advantage in such a comparison because it was tested only at sites with ideal growing conditions. Another hybrid tested at sites with less-than-ideal growing conditions would have yields that tended to be lower. In this example, it would be difficult to determine whether yield differences were because of differences in genetic yield potential or simply because of differences in the environmental conditions under which they were tested. The solution is to compare hybrids based on relative yields rather than absolute yields.

To calculate relative yield, the yield for each hybrid at each site is divided by the average yield for all hybrids tested at that same site and multiplied by 100. Once each hybrid at each site has been assigned a relative yield, comparisons can be made between hybrids tested at the same site or different sites. For hybrids tested at multiple sites, we can also calculate a multi-site relative yield average.

Relative yields of 100 indicate hybrids that were average performers. Relative yields greater than 100 indicate yields above-average. Relative yields less than 100 indicate yields below-average. The magnitude of the relative yield numbers indicate how far above or below average a hybrid performed. For example, a hybrid with a relative yield of 110 yielded 10% of above the average yield for all hybrids at that site.

## Choice of Hybrids

When making hybrid selections it is important to realize that hybrids differ in their performance in different environments. Some hybrids are more adapted to a wide range of environments. Hybrid performance may vary with year and location variations in rainfall, temperature, pests and other environmental variables. In these experiments, many hybrids have essentially the same yield, and great care should be taken in interpreting the results of a single year's tests, especially at only one location. For these reasons it is important, whenever possible, to also look at a hybrid's average across locations when making hybrid selections. Multi-year averages give even greater confidence to hybrid performance decisions. The relative yield tables compare the yield of a hybrid to the average yield of all hybrids in the test. These tables are an excellent summary of yield potential compared to other hybrids.

## 2017 Virginia Corn Hybrid Plot Information

(Rates are on a per acre basis.)

### Blackburg Whitethorne Farm

**Planted:** May 17, 2017 no-till into killed cereal cover  
**Harvested:** November 2, 2017  
**Population:** 18,120 plants/acre  
**Pesticide:** 2 qt glyphosate April 21, 2017; 1 qt Atrazine 4L + 3 qt Acuron + 0.25% NIS May 3, 2017; 5 lb Force® 3G at planting; 1 pt Atrazine + .5 pt Banvel + 0.25% NIS June 21, 2017  
**Fertilizer:** Lime 2.25 ton April 18, 2017; 30-40-60 pre-plant incorporated May 3, 2017; 17 gal 15-15-0-2S-.13B-.25Zn at planting; 140 lb N as 30-0-0 sidedressed June 15, 2017  
**Plot Size:** 2 rows 25' x 30" 4 replications  
**Previous crop:** corn  
**Soil Type:** Hayter loam  
**Cooperator:** Jon Wooge

### Blackstone Southern Piedmont Agricultural Research & Extension Center

**Planted:** April 18, 2016 no-till into soybean stubble  
**Harvested:** August 31, 2017  
**Population:** 20,140 plants/acre  
**Pesticide:** 2 qt Buccaneer® + 2 qt Brawl April 19, 2017  
**Fertilizer:** 1000 lb 10-10-10 pre-plant incorporated April 7, 2017; 80 lb N top-dressed using UAN May 19, 2017  
**Plot Size:** 2 rows 25' x 30" 4 replications  
**Soil Type:** Appling and Durham sandy loam  
**Previous crop:** Soybean  
**Cooperator:** Ned Jones

### Holland Tidewater Agricultural Research & Extension Center

**Planted:** April 19, 2017 no-till after cotton and peanuts  
**Harvested:** September 11, 2017  
**Pesticide:** 1 qt Roundup March 30, 2017; 4 pt Bicep® + 2 pt Princep April 18, 2017;  
**Fertilizer:** 283 lb 10-14-28 April 10, 2017; 17 gal 15-15-0-2S-.13B-.25Zn at planting; 165-0-0-20 sidedressed May 31, 2017  
**Plot Size:** 2 rows 25' x 30" 4 replications  
**Soil Type:** Emporia, Nansemond  
**Previous crop:** Cotton, peanuts  
**Cooperator:** Karl Jones

### Mt Holly (dryland) Virginia Crop Improvement Association Foundation Seed Farm

**Planted:** April 29, 2017 no-till into soybean stubble  
**Harvested:** September 20, 2017  
**Population:** 25,100 plants/acre  
**Pesticide:** 3 qt Acuron® + 1 pt atrazine pre-plant; 5 lb Force® 3G at planting; 4 oz dicamba post-plant  
**Fertilizer:** 60-40-60 pre-plant incorporated; 17 gal 15-15-0-2S-.13B-.25Zn at planting; 120 lb N with Agrotain side-dressed June 2, 2017  
**Plot Size:** 2 rows 25' x 30" 4 replications

**Soil Type:** State fine sandy loam  
**Previous crop:** Soybean  
**Cooperator:** Phillip Browning

### Mt Holly (irrigated) Virginia Crop Improvement Association Foundation Seed Farm

**Planted:** April 28, 2017 no-till into soybean stubble  
**Harvested:** September 23-24, 2017  
**Population:** 30,360 plants/acre  
**Pesticide:** 3 qt Acuron® + 1 pt atrazine pre-plant; 5 lb Force® 3G at planting; 4 oz dicamba post-plant  
**Fertilizer:** 60-40-60 pre-plant incorporated; 17 gal 15-15-0-2S-.13B-.25Zn at planting; 150 lb N plus Agrotain fertigated June 6, 2017  
**Irrigation:** 7" over the growing season  
**Plot Size:** 2 rows 25' x 30" 4 replications  
**Soil Type:** State fine sandy loam  
**Previous crop:** Soybean  
**Cooperator:** Phillip Browning

### Orange Northern Piedmont Center

**Planted:** May 3, 2017 no-till into soybean stubble  
**Harvested:** October 23, 2017  
**Population:** 22,950 plants/acre  
**Pesticide:** 3 qt Acuron® + 2.8 qt Gramaxone® April 8, 2017 5 lb Force® 3G at planting  
**Fertilizer:** 30-80-40 May 1, 2017; 17 gal 15-15-0-2S-.13B-.25Zn at planting; 100 lb liquid N side-dressed June 7, 2017  
**Plot Size:** 2 rows 25' x 30" 4 replications  
**Soil Type:** Starr silt loam  
**Previous crop:** soybeans  
**Cooperators:** Brad Lael

### Shenandoah Valley (Thanks to Mark Deavers)

**Planted:** May 2, 2017 no-till into soybean stubble  
**Harvested:** October 6, 2017  
**Population:** 18,760  
**Pesticide:** 1.125 qt Acuron flexi + 1.5 qt Atrex + 1.5 qt Princep + 1.92 oz Kendo + 1.5 qt Glysrar K Plus + .25 qt Topeka + 1.5 qt Unison preplant; 5 lb Force® 3G at planting; .66 oz Primero + 1.25 qt Prowl + 3 oz Status post-emergence  
**Fertilizer:** 4 tons poultry litter + 2 tons wood ash + 30-0-0-6.5 preplant; 17 gal 15-15-0-2S-.13B-.25Zn at planting;  
**Plot Size:** 2 rows 25' x 30" 4 replications  
**Soil Type:** Edom silty clay loam  
**Previous crop:** Soybeans  
**Cooperators:** Doug Horn and Mark Deavers

# The Handy Bt Trait Table for U.S. Corn Production

Updated  
15 March 2017

Posted at [www.msuent.com](http://www.msuent.com)

For questions, complaints, or corrections: Chris DiFonzo, Michigan State University, [difonzo@msu.edu](mailto:difonzo@msu.edu)  
Contributors: Pat Porter, Texas A&M University & Kelley Tilmon, The Ohio State University

Most corn hybrids planted in the U.S. contain one or more transgenic traits for weed or insect management. These traits can increase flexibility and profitability for producers, but sometimes cause confusion about their spectrum of control or refuge requirements. The Handy Bt Trait Table provides a helpful list of trait names (below) and details of trait packages (next page) to make it easier to read company seed guides, sales materials, and bag tags. Note that there are two versions of the table (north/Midwest vs. south/cotton belt) which differ only in refuge percentages.

## Important clarifications or changes to the Trait Table for 2017

- ✓ An insect is listed in the CONTROL SPECTRUM column if seed providers claim protection or efficacy for a given Bt package; insect species which are 'suppressed' are no longer listed. Actual field-level performance of hybrids on lepidopteran and rootworm larvae may differ if there are local or regional insect populations which are less susceptible or resistant to Bt proteins.
- ✓ To address local or regional performance issues, a new column ('May be ineffective on') was added to highlight insect x Bt toxins with documented field-failures, confirmed resistance, or cross-resistance. An insect is listed in this column only if ALL of the Bt proteins which should control it in a product are 'ineffective' somewhere in the US or Canada. Ineffective ratings are based on published lab assays &/or field research from field corn, sweet corn, and cotton. University extension specialists or local educators can assist in determining if you are in an area where reduced effectiveness was reported. On a broader scale, this column is intended to alert growers and consultants to potential management problems, influence seed selection, and encourage field scouting.
- ✓ The refuge column was simplified to include only the % and an indication if the refuge is in the bag.

## **Field corn 'events' (transformations of one or more genes) and their Trade Names**

Trade name for trait	Event	Protein(s) expressed	Insect Target or Herbicide Activity
Agrisure CB/LL	Bt11	Cry1Ab + PAT	corn borer + glufosinate tolerance
Agrisure Duracade	5307	eCry3.1Ab	rootworm
Agrisure GT	GA21	EPSPS	glyphosate tolerance
Agrisure RW	MIR604	mCry3A	rootworm
Agrisure Viptera	MIR162	Vip3A	broad lep control (but not corn borer)
Herculex 1 or CB	TC1507	Cry1Fa2 + PAT	corn borer + glufosinate tolerance
Herculex RW	DAS-59122-7	Cry34Ab1/Cry35Ab1 + PAT	rootworm + glufosinate tolerance
Roundup Ready 2	NK603	EPSPS	glyphosate tolerance
Yieldgard Corn Borer	MON810	Cry1Ab	corn borer
Yieldgard Rootworm	MON863	Cry3Bb1	rootworm
Yieldgard VT Pro	MON89034	Cry1A.105 + Cry2Ab2	broader lep control
Yieldgard VT Rootworm RR	MON88017	Cry3Bb1 + EPSPS	rootworm + glyphosate tolerance

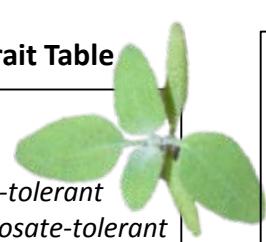

## **Abbreviations used in the Trait Table**

Herbicide activity

GT glyphosate tolerant

LL Liberty Link - glufosinate-tolerant

RR2 Roundup Ready 2, glyphosate-tolerant

### Insect targets

BCW black cutworm

SB stalk borer

CEW corn earworm

SCB sugarcane borer

ECB European corn borer

SWCB southwestern corn borer

FAW fall armyworm

TAW true armyworm

RW corn rootworm

WBC western bean cutworm

\* Relative yield is calculated by dividing the yield of a hybrid by the average yield of all hybrids of all maturities at that location. A hybrid with a relative yield of 105 was 5% above the average of all hybrids at that location. The value of 105 is not a yield but a value relative to all other yield values at that location. Relative yields are listed in order of descending mean values.

<sup>1</sup> Days to maturity provided by company; differences in maturity rating methods may exist between companies.

<sup>1</sup> Days to maturity provided by company; differences in maturity rating methods may exist between companies.

<sup>2</sup> Reported at 15.5% moisture.

<sup>3</sup> Percentage of plants lodged based on the average plant population for the site.

Planted May 2, 2017. Harvested October 6, 2017. Population was 18,760 plants/acre.

Note: The Shenandoah Valley site was abandoned in 2016 thereby causing a lack of 2- and 3-year data.
