# Introduction

## Background Information

Performance trials of commercial corn hybrids were conducted at six locations in Virginia in 2020. The Mt. Holly location consisted of both an irrigated and non-irrigated test. All locations were planted with a Wintersteiger PlotKing 2600. All locations were harvested with a Massey-Ferguson 8XP plot combine. Yields have been adjusted to 15.5% moisture. Grain test weight, moisture, and plot grain weights were measured with a GrainGauge® manufactured by HarvestMaster. A list of companies participating in the trials is provided before the table of contents. All hybrids entered in the Virginia trials are those submitted by commercial companies. The locations at which particular hybrids were entered were specified by the company. Companies entering hybrids were charged a fee for each hybrid per location to support the Virginia Corn Hybrid and Management Trials.

## Yield Differences

Experimental plots vary in yield and other measurements due to location in the field and other factors which cannot be controlled. Statistics given in the tables are intended to help the reader make valid comparisons between hybrids. The magnitude of differences which may have been due to uncontrollable variation has been computed for the data and listed at the bottom of columns as the LSD (.05) (least significant difference with 95% confidence). Differences less than the LSD are assumed not to be real differences with 95% confidence.

## Understanding Relative Yield

Companies entering hybrids decide which hybrids are planted at which locations. Combining and comparing absolute yield and other results from multiple sites is inappropriate when not all hybrids are planted at all locations. For example, one hybrid might have an unfair advantage in such a comparison because it was tested only at sites with ideal growing conditions. Another hybrid tested at sites with less-than-ideal growing conditions would have yields that tended to be lower. In this example, it would be difficult to determine whether yield differences were because of differences in genetic yield potential or simply because of differences in the environmental conditions under which they were tested. The solution is to compare hybrids based on relative yields rather than absolute yields.

To calculate relative yield, the yield for each hybrid at each site is divided by the average yield for all hybrids tested at that same site and multiplied by 100. Once each hybrid at each site has been assigned a relative yield, comparisons can be made between hybrids tested at the same site or different sites. For hybrids tested at multiple sites, we can also calculate a multi-site relative yield average.

Relative yields of 100 indicate hybrids that were average performers. Relative yields greater than 100 indicate yields above-average. Relative yields less than 100 indicate yields below-average. The magnitude of the relative yield numbers indicates how far above or below average a hybrid performed. For example, a hybrid with a relative yield of 110 yielded 10% of above the average yield for all hybrids at that site.

## Choice of Hybrids

When making hybrid selections it is important to realize that hybrids differ in their performance in different environments. Some hybrids are more adapted to a wide range of environments. Hybrid performance may vary with year and location variations in rainfall, temperature, pests and other environmental variables. In these experiments, many hybrids have essentially the same yield, and great care should be taken in interpreting the results of a single year's tests, especially at only one location. For these reasons it is important, whenever possible, to also look at a hybrid's average across locations when making hybrid selections. Multi-year averages give even greater confidence to hybrid performance decisions. The relative yield tables compare the yield of a

hybrid to the average yield of all hybrids in the test. These tables are an excellent summary of yield potential compared to other hybrids.

## 2020 Virginia Corn Hybrid Plot Information (Rates are on a per acre basis.)

### Blacksburg Kentland Farm

**Planted:** April 29, 2020 no-till  
**Harvested:** October 8, 2020  
**Population:** 23,217 plants/acre  
**Pesticide:** 2 qt glyphosate; 1 pt atrazine 4L + 3 qt Acuron®; 5 lb Force® 3G at planting  
**Fertilizer:** 40-100-60; 17 gal 15-15-0-2S-.13B-.25Zn at planting; 160 lb N as UAN side-dressed May 28, 2020  
**Plot Size:** 2 rows 25' x 30" 4 replications  
**Previous crop:** Corn  
**Soil Type:** Hayter loam  
**Cooperator:** Brooks Saville

### Blackstone Southern Piedmont Agricultural Research & Extension Center

**Planted:** April 17, 2020 conventional tillage  
**Harvested:** September 1-2, 2020  
**Population:** 25,688 plants/acre  
**Pesticide:** 1 pt Brawl II ATZ™ + 1 qt atrazine April 17, 2020  
**Fertilizer:** 1000 lb 10-10-10 preplant incorporated April 10, 2020; 17 gal 15-15-0-2S-.13B-.25Zn at planting; 80 lb N top-dressed using UAN May 21, 2020  
**Plot Size:** 2 rows 25' x 30" 4 replications  
**Soil Type:** Appling sandy loam  
**Cooperator:** Ned Jones

### Holland Tidewater Agricultural Research & Extension Center

**Planted:** April 9, 2020 no-till  
**Harvested:** September 1-2, 2020  
**Population:** 25,613 plants/acre  
**Pesticide:** 1 qt glyphosate + 1 pt 2,4-D+ 1 qt Liberty March 28, 2020; 4 pt Bicep® + 2 pt Simazine April 17, 2020  
**Fertilizer:** 426 lb 14-9-18 April 3, 2020; 17 gal 15-15-0-2S-.13B-.25Zn at planting; 60gal 24-0-0-3 side-dressed May 26, 2020  
**Plot Size:** 2 rows 25' x 30" 4 replications  
**Soil Type:** Emporia, Nansemond  
**Cooperator:** Karl Jones

### Mt Holly (dryland) Virginia Crop Improvement Association Foundation Seed Farm

**Planted:** April 16, 2020 no-till into soybean stubble  
**Harvested:** September 15-16, 2020  
**Population:** 27,312 plants/acre  
**Pesticide:** 1.5 qt Acuron® + 1.5 qt Princep® preplant; 5 lb Force® 3G at planting; 1.5 qt Acuron® + 4 oz dicamba post-plant  
**Fertilizer:** 60-40-60 pre-plant incorporated; 17 gal 15-15-0-2S-.13B-.25Zn at planting; 40 lb N with black label zinc first shot then 80 lb with black label zinc + 2 oz Radiate® second shot  
**Plot Size:** 2 rows 25' x 30" 4 replications  
**Soil Type:** Nansemond, Lumbee, State  
**Previous crop:** Soybeans  
**Cooperator:** Phillip Browning

### Mt Holly (irrigated) Virginia Crop Improvement Association Foundation Seed Farm

**Planted:** April 16, 2020 no-till into soybean stubble  
**Harvested:** abandoned due to exceptionally erratic stand  
**Plot Size:** 2 rows 25' x 30" 4 replications  
**Soil Type:** State fine sandy loam  
**Previous crop:** Soybeans  
**Cooperator:** Phillip Browning

### Orange Northern Piedmont Center

**Planted:** April 22, 2020 no-till into soybean stubble  
**Harvested:** September 23, 2020  
**Pesticide:** 1.5 qt Acuron® + 2 qt glyphosate + 1 pt atrazine April 17, 2020; 5 lb Force® 3G at planting  
**Fertilizer:** 40-100-60 April 21, 2020; 70 lb N June 15, 2020

**Population:** 24,626 plants/acre  
**Plot Size:** 2 rows 25' x 30" 4 replications  
**Soil Type:** Davidson clay  
**Previous crop:** Soybeans  
**Cooperators:** Greg Lillard

**Shenandoah Valley (Thanks to Michael Thompson and Roundhill Poultry, LLC)**

**Planted:** May 15, 2020 no-till into killed cover  
**Harvested:** October 22, 2020  
**Population:** 26,360 plants/acre  
**Pesticide:** 1 lb atrazine 90DF + 1 lb simazine 90DF + 1.25 qt glyphosate preplant; 5 lb Force® 3G at planting; .75 lb atrazine 90DF over the top  
**Fertilizer:** 3 tons turkey litter preplant; 17 gal 15-15-0-2S-.13B-.25Zn at planting; 65 lb N topdressed  
**Plot Size:** 2 rows 25' x 30" 4 replications  
**Soil Type:** Frederick and Lodi silt loam  
**Previous crop:** Soybeans  
**Cooperators:** Doug Horn and Michael Thompson

<sup>1</sup> Days to maturity provided by company; differences in maturity rating methods may exist between companies.

Note: Relative yield is calculated by dividing the yield of a hybrid by the average yield of all hybrids of all maturities at that location. A hybrid with a relative yield of 105 was 5% above the average of all hybrids at that location. The value of 105 is not a yield but a value relative to all other yield values at that location. Relative yields are listed in order of descending mean values.

Note: Holland values were not used in the calculation of relative yield as the values were so variable.

<sup>1</sup> Days to maturity provided by company; differences in maturity rating methods may exist between companies.

<sup>2</sup> A higher number of site/year combinations provides a better estimate of hybrid performance than a single site/year location.

Note: Relative yield is calculated by dividing the yield of a hybrid by the average yield of all hybrids of all maturities at that location. A hybrid with a relative yield of 105 was 5% above the average of all hybrids at that location. The value of 105 is not a yield but a value relative to all other yield values at that location. Relative yields are listed in order of descending mean values. A hybrid does not have to be entered in the same three locations each year.
