Information Series No. 494

January 2011

ACKNOWLEDGEMENTS

We would like to dedicate this publication to the memory of Homer R. Pond, who recently passed away. Homer was a valued collaborator of the PVQE program and for many years he hosted PVQE research plots on his farm.

FINANCIAL SUPPORT

The authors gratefully acknowledge financial support from the following institutions and organizations:

SC PEANUT GROWERS

**NC STATE
UNIVERSITY**

CLEMSON
UNIVERSITY

TECHNICAL SUPPORT

The following agricultural specialists, technicians, and lab assistants are gratefully acknowledged for their professionalism, and dedication to achieve tasks on time and in a collegial manner: F. Bryant, D. Redd, C. Daughtrey, B. Kennedy, P. Copeland, L. Mehalko, and T. Balota. Appreciation is extended to Dr. Allen Harper for his support with implementing collegiality in the PVQE group, and Dr. Pat Phipps for his technical advice and mentoring role of a new faculty member, Dr. Maria Balota.

Louis Mehalko, left, Pam Copeland, center, and Tibi Balota, right.

Carolyn Daughtrey, below

Doug Redd (left) and Frank Bryant (right)

Brenda Kennedy, above

All of the following cooperators are also acknowledged for their various support provided to the PVQE program in 2010.

LIST OF COOPERATORS

Virginia Tech, Virginia Agricultural Experiment Station, and VCIA

Mr. R. D. Ashburn, Farm Manager, Tidewater AREC
Dr. P. Phipps, Tidewater AREC
Dr. D. A. Herbert, Jr., Tidewater AREC
Mr. Bruce Beahm, VCIA

Other universities

Dr. T. Isleib, NCSU
Mr. L. Ransom, Border Belt Tobacco Research Station, NCSU
Mr. C. Bogle, Upper Coastal Plain Research Station, NCSU
Dr. J. Chapin, Clemson University
Mr. J. Farmer, PeeDee Research and Education Center, Farm Manager, Clemson University
Mr. D. Gunter, Extension Associate, PeeDee Research and Education Center, Clemson University

Growers

Mr. T. Slade, Martin Co., NC
Mr. H. R. Pond, Southampton Co., VA
Mr. J. Pope, Southampton Co., VA

County Agents

Ms. S. Sharp, Suffolk, VA
Mr. M. White, Greensville/Emporia, VA
Mr. G. Slade, Surry Co., VA
Mr. K. Wells, Sussex Co., VA
Mr. A. Cochran, Martin Co., NC

Commodity Groups

Mr. D. Cotton, Virginia Peanut Board
Mr. B. Sutter, North Carolina Peanut Board

Companies

Mr. F. Garner, Birdsong Peanut
Mr. K. Bennett, Birdsong Peanut
Mr. J. Laine, Wakefield Peanut Company

ABBREVIATIONS

% Loose Shelled Kernels (%LSK), percent of kernels or portions of kernels free from hulls and scattered throughout the pod sample.

% Foreign Material (%FM), percent of anything other than mature pods found in the sample, including dirt, vines, sticks, stones, insects, broken shells, and raisins (immature pods with shriveled and shrunken shells that cannot be mechanically shelled).

% Moisture, percent kernel moisture at grading, as determined by an electronic moisture meter.

% Fancy, percent pods that ride the 34/64 inch spacing set on the pre-sizer.

% Extra Large Kernels (%ELK), percent kernels which ride a 21.5/64 x 1 inch slotted screen.

% Sound Splits (%SS), percent split or broken kernels which are not damaged. Portions less than 1/4 of a whole kernel are not included but go into other kernels.

% Damaged Kernels (%DK), percent moldy and decayed kernels, or with skin and flesh discoloration due to insects and weather damage.

% Other Kernels (%OK), percent kernels passing through a 15/64 x 1 inch slotted screen. Splits and broken pieces, 1/4 kernel or larger which pass through this screen are considered SS or DK depending upon their condition.

% Sound Mature Kernels (%SMK), percent whole kernels which ride a 15/64 x 1 inch slotted screen. Splits that ride this screen are included as SS or DK, as the case may be.

% Total Kernels, percent all kernels in the shelling sample including SMK, SS, OK, and DK.

Support Price (\$/cwt), price based on a standard loan price (\$358.06 per ton for Virginia-type and \$354.54 per ton for runner-type peanut) taking the various grade factors into consideration.

Yield (lb/A), plot weights converted to an acre basis. All yields are adjusted to a standard 7% moisture with %FM deducted.

Value (\$/A), crop value computed by the following formula:

$$\text{Value} = [\text{Yield} - (\% \text{ LSK})(\text{Yield})] [\text{Support Price/lb}] + \text{Yield} (\% \text{ LSK})(\$0.07/\text{lb LSK})$$

Introduction

INTRODUCTION

Peanut is an important crop for the Virginia and the Carolinas. It annually brings over \$90 million to the economies of this region from over 180,000 acres planted every year. For example this year, 18,000 acres were planted in Virginia, 88,000 in North Carolina, and 65,000 in South Carolina. Average yield was approximately 1,800 lb/A in Virginia, 2,600 in North Carolina, and 3,200 in South Carolina. Due to suitability to the environmental conditions and existence of a strong peanut industry tailored to process primarily the large-seeded Virginia-type peanut, growers in Virginia and North Carolina generally grow Virginia-type cultivars. More recently, farmers in South Carolina started to grow the large-seeded Virginia-type cultivars, too. For example this year, production of Virginia-type peanut in South Carolina averaged 72,952 tons from 87,360 in total. In the view of a common interest in the Virginia-type peanut, the three states are working together through a multi-state project, the Peanut Variety Quality Evaluation Project (PVQE), to evaluate advanced breeding lines and standard varieties throughout their production regions. The objectives of this project are: 1) to determine yield, grade, quality, and disease response of released peanut varieties and advanced breeding lines at various locations in Virginia and the Carolinas, 2) develop a database for Virginia-type peanut to allow research-based selection of the best genotypes by growers, industry, and the breeding programs, and 3) to identify the most suited peanut genotypes for various regions that can be developed into varieties. This report contains agronomic and grade data of the PVQE tests in 2010.

Plant Material and Test Locations

PLANT MATERIAL AND TEST LOCATIONS

In 2010, PVQE included 36 genotypes: 11 commercial varieties and 25 advanced breeding lines developed by the Virginia and North Carolina peanut breeding programs (Table 1). Among the breeding lines, 14 have the ‘high oleic acid’ characteristic and they are marked by ‘ol’ letters in their names; the others are conventional genotypes for this trait. Genotypes were planted from 15 April to 21 May at six locations: at the Tidewater AREC in Suffolk, VA, Southampton Co., VA, Martin Co., NC, the Upper Coastal Plain Research Station near Rocky Mount, NC, the Border Belt Tobacco Research Station near Whiteville, NC, and the PeeDee Research and Education Center at Florence, SC. At Suffolk three and at Martin two planting dates and three replications within each planting date were planted (Table 2). At all other locations, only one planting date and three replications at each site were planted. At all locations, plots were arranged in a randomized complete block design. The commercial varieties are used as checks for the performance of the breeding lines as the ultimate objective is development of new Virginia-type peanut varieties. Some breeding lines were selected for evaluation because they exhibited good performance in the previous years. Some other lines are relatively new.

Plant Material and Test Locations

Table 2. Planting, digging and combining dates for each test location in 2010. Planting date I was considered an early planting, II optimum planting, and III late planting times for peanut in V-C area.

Locations	Planting Date (PD)			Digging Date			Combining Date		
	I	II	III	I	II	III	I	II	III
Tidewater AREC, VA	April 15	May 3	May 21	Oct. 7	Oct. 13	Oct. 19	Oct. 13	Oct. 22	Oct. 29
Southampton Co., VA	April 19			Oct. 6			Oct. 12		
Martin Co., NC	April 23	May 15		Oct. 11	Oct. 19		Oct. 18	Oct. 25	
Rocky Mount, NC	May 6			Oct. 14			Oct. 19		
Whiteville, NC	May 11			Sept. 22			Oct. 7		
Florence, SC	May 10			Sept. 22			Oct. 8		

Weather Conditions

WEATHER CONDITIONS

The 2010 was an exceptionally dry year at all locations, but more so at locations in Virginia and North Carolina. Rain was almost absent in June, July, and August at Suffolk and Martin Co., and minimal at Southampton Co., Rocky Mount and Whiteville. In South Carolina precipitation was abundant, although at times drought episodes were recorded due to extreme high temperatures. Irrigation was applied to the plots at all locations with the exception of Martin Co., NC. After a very dry and hot summer, end of September brought excessive rain. Some of this rain was received in a short amount of time and, for some locations, after peanut was inverted. Drought, heat, and excessive rain in the fall contributed to high content of DK, FM, and LSK, in 2010. Weather information is provided in Tables 3 through 8.

Table 3. Temperature of air and soil at 4 inches depth, peanut heat units (degree day – DD56) calculated based on a 56 °F temperature base (T_b), light (photosynthetic active radiation – PAR), air relative humidity (RH), and precipitation at Tidewater AREC, Suffolk VA, in 2010 peanut growing season. These data were recorded next to the plots from planting of PD I to the harvest of PD III.

Month	AVG Tair	Max Tair	Min Tair	AVG Tsoil	Heat units DD56	AVG PAR ¹	Max PAR	RH	Rain inch
May	70	83	60	70	238	567	1770	71	6.12
June	81	93	70	80	820	649	1987	71	0.33
July	82	96	69	81	1583	627	1860	69	0.01
August	79	92	69	79	2348	539	1715	80	0.24
September	74	88	60	73	2960	536	1772	69	17.14
October	61	76	50	64	3318	247	2117	71	1.91
Mean	75	88	63	75	3318	527	1870	72	25.72

¹ Light is important for peanut growth and development. On a fully sunny day, maximum PAR approaches 2500 $\mu\text{mol m}^{-2} \text{s}^{-1}$ and average PAR (average from sunrise to sunset) is approximately 600 $\mu\text{mol m}^{-2} \text{s}^{-1}$. If these numbers are less, it denotes cloudy days, on which plants grow less.

Weather Conditions

Table 4. Temperature, peanut heat units (degree day – DD56) calculated based on a 56 °F temperature base (T_b), air relative humidity (RH), and precipitation at Southampton County, VA, in 2010 peanut growing season.

Weather Conditions

Table 8. Temperature of air, peanut heat units (degree day – DD56) calculated based on a 56 °F temperature base (T_b), air relative humidity (RH), and precipitation at Pee Dee Research and Education Center in Florence, SC, in 2010 peanut growing season. These data are provided by the State Climate Office of NC from 1 May to 31 October.

Month	AVG Tair	Max Tair	Min Tair	Heat units DD56	RH	Rain
	°F	°F	°F	dd	%	inch
May	74	86	64	382	72	2.5
June	81	92	72	1162	74	8.4
July	81	92	73	1973	75	8.9
August	81	91	73	2776	79	5.8
September	77	90	66	3430	68	9.4
October	64	78	52	3699	68	0.0
Mean	76	88	66	3699	73	35.0

Cultural Practices

CULTURAL PRACTICES

Cultural practices were performed according to Virginia and North Carolina recommendations. Plots were 30 ft rows planted on 36-inch centers (3 seed/row ft) with a two-row planter. All plots were dug with a KMC 2-row Planting Digger, and combined with a 2-row Hobbs peanut picker, model 325A, equipped with a bagging attachment. Tables 9 through 16 show planting dates, soil type, pH and mineral content, and cultural practices applied to the crops at each location.

2010 Results by Location

RESULTS

Throughout the growing season, plant growth habit was measured (Table 17). Seedcoat color and maturity are presented in Table 18. This year, disease incidence was evaluated only at Suffolk and Whiteville a few days before digging (Tables 19-20). But in general, the disease incidence was very low at all locations. After harvest, yield and farmer-stock grade factors including percentages of jumbo and fancy pods, pod brightness, foreign material (%FM), loose shelled kernels (%LSK), % jumbo and fancy pods, extra large kernels (%ELK), sound mature kernels (%SMK), sound splits (%SS), other kernels (%OK), damaged kernels (%DK), pod brightness (Hunter L score) for jumbo and fancy pods, pod yield adjusted for 7% kernel moisture, price per pound calculated by the federal formula.

The results are presented in tables 21 to 36 and figures 1 through 36 for individual locations and all locations combined. Two-year averages are presented in Tables 37-42 for Tidewater AREC (Suffolk), Southampton County, VA, Martin County, NC and Florence, SC, for genotypes grown in 2009 and 2010. Average of 2 years (2009-2010) for all common locations and genotypes are in Table 43.

¹ Hit (one foot row) count per plot with plants showing symptoms of Tomato Spotted Wilt Virus and Sclerotinia Blight.

² Means sharing the same letter(s) are not statistically different, at P=0.05 based on the Fisher's protected LSD test.

¹ All yields are net, adjusted to 7% standard moisture and foreign material is deducted.

² Means sharing the same letter(s) are not statistically different, at P=0.05 based on the Fisher's protected LSD test.

³ Fisher's least significant difference (LSD) at P = 0.05.

2010 Results by Location

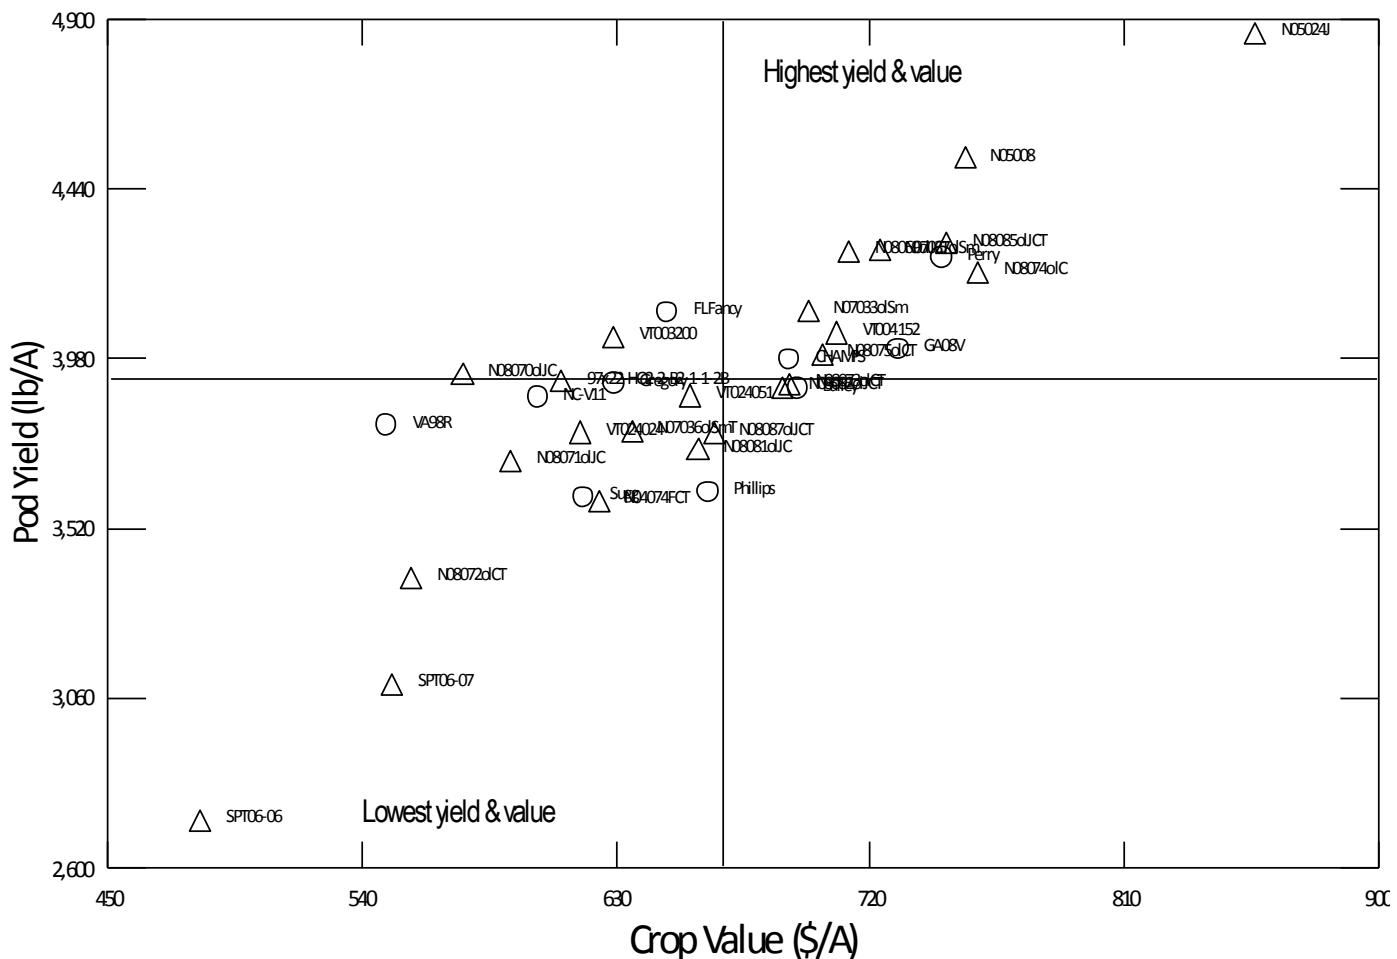

Figure 10. Summary of pod yield and crop value at Tidewater AREC (Suffolk), VA, Planting Date I in 2010. Vertical bar represents mean crop value and horizontal bar mean pod yield of 36 genotypes. Circles represent commercial varieties, and triangles advanced breeding lines. The right and upper rectangle shows the best genotypes for yield and value at this location and planting time.

2010 Results by Location

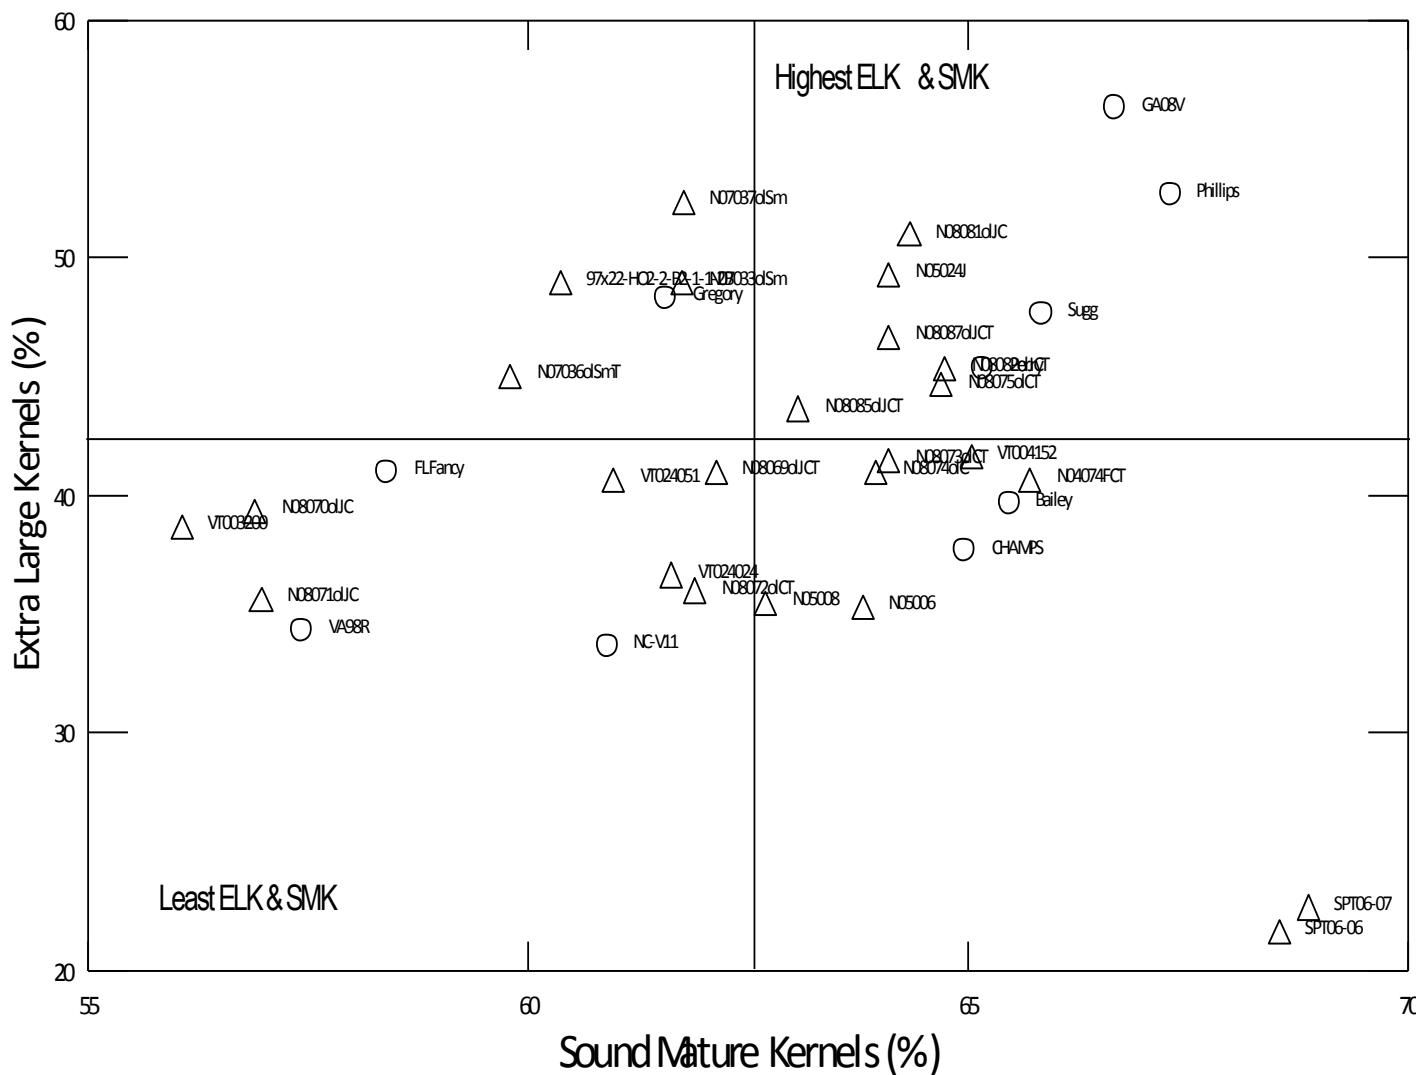

Figure 11. Summary of Extra Large Kernel (ELK) and Sound Mature Kernel (SMK) content at Tidewater AREC (Suffolk), VA, Planting Date I in 2010. Vertical bar represents mean of SMK content and horizontal bar mean of ELK content of 36 genotypes. Circles represent commercial varieties, and triangles advanced breeding lines lines. The right and upper rectangle shows the best genotypes for ELK and SMK content at this location and planting time.

¹ All yields are net, adjusted to 7% standard moisture and foreign material is deducted.² Means sharing the same letter(s) are not statistically different, at P=0.05 based on the Fisher's protected LSD test.³ Fisher's least significant difference (LSD) at P = 0.05.

2010 Results by Location

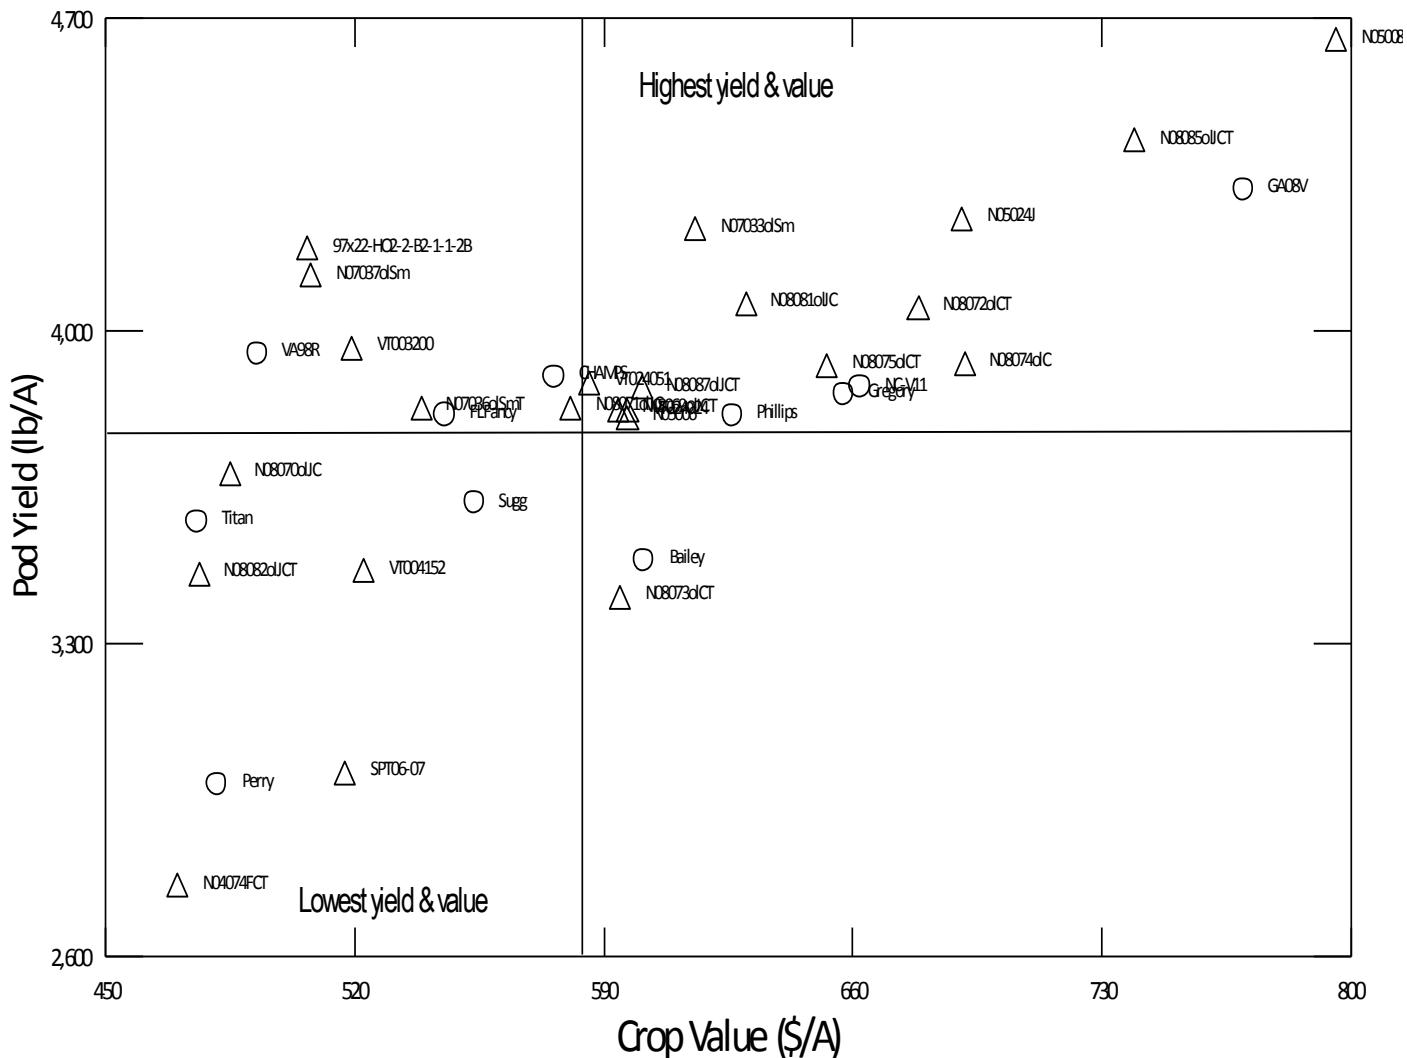

Figure 12. Summary of pod yield and crop value at Tidewater AREC (Suffolk), VA, Planting Date II in 2010. Vertical bar represents mean crop value and horizontal bar mean pod yield of 36 genotypes. Circles represent commercial varieties, and triangles advanced breeding lines. The right and upper rectangle shows the best genotypes for yield and value at this location and planting time.

2010 Results by Location

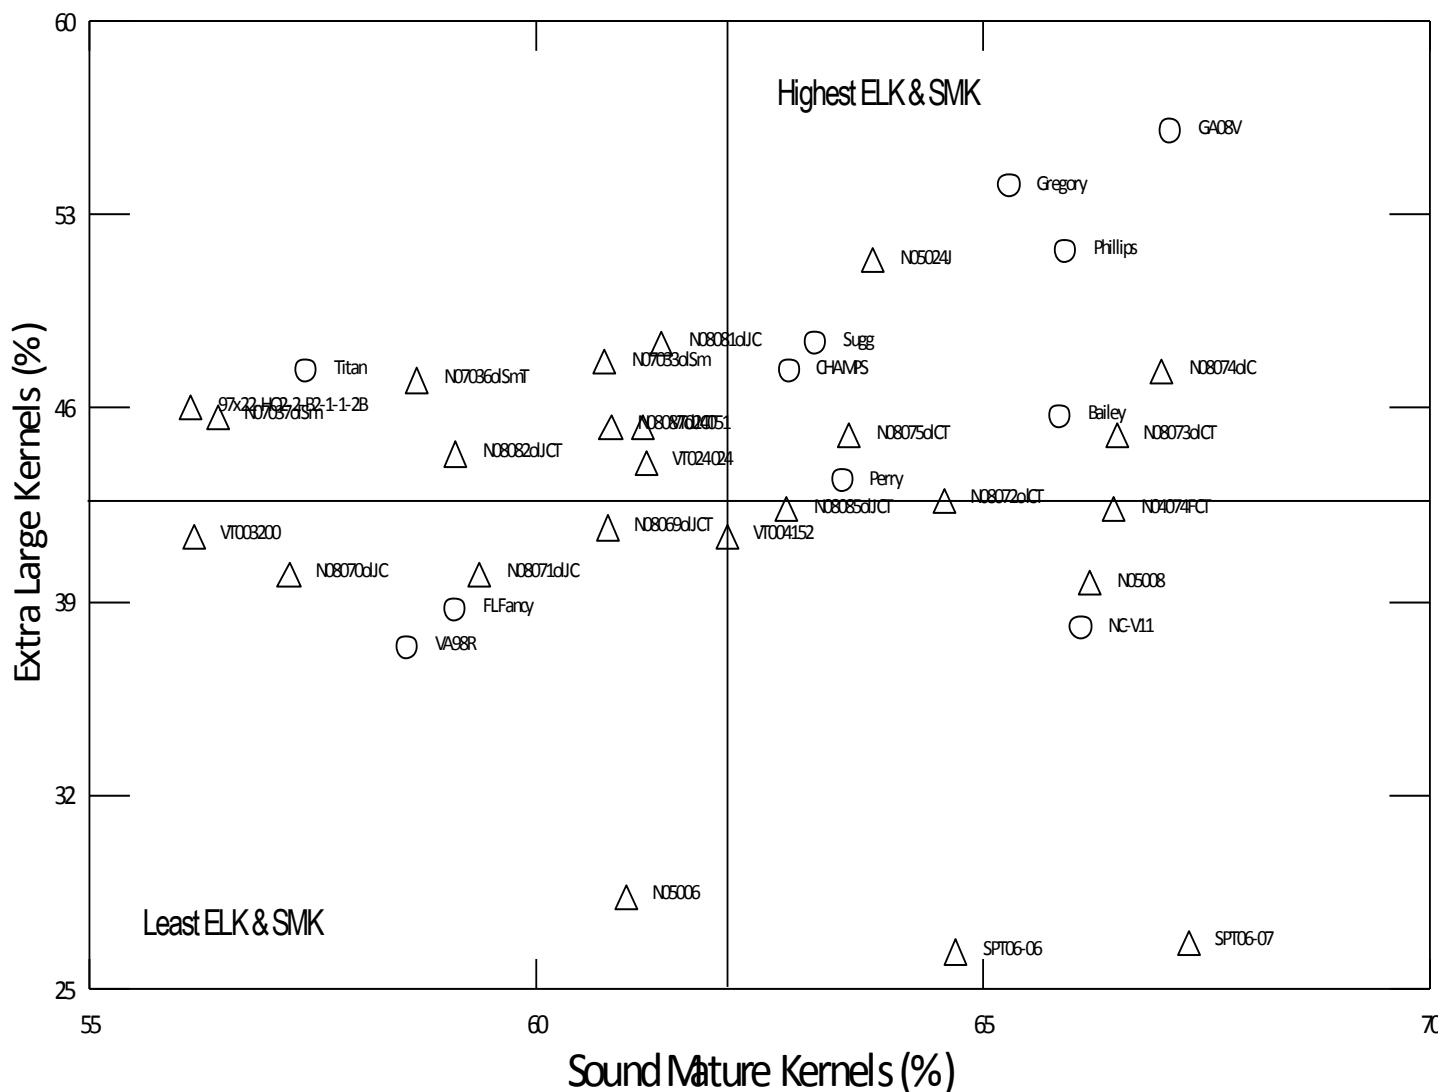

Figure 13. Summary of Extra Large Kernel (ELK) and Sound Mature Kernel (SMK) content at Tidewater AREC (Suffolk), VA, Planting Date II in 2010. Vertical bar represents mean of the SMK content and horizontal bar mean of the ELK content of 36 genotypes. Circles represent commercial varieties, and triangles advanced breeding lines. The right and upper rectangle shows the best genotypes for ELK and SMK content at this location and planting time.

¹ All yields are net, adjusted to 7% standard moisture and foreign material is deducted.

² Means sharing the same letter(s) are not statistically different, at P=0.05 based on the Fisher's protected LSD test.

³ Fisher's least significant difference (LSD) at P = 0.05.

2010 Results by Location

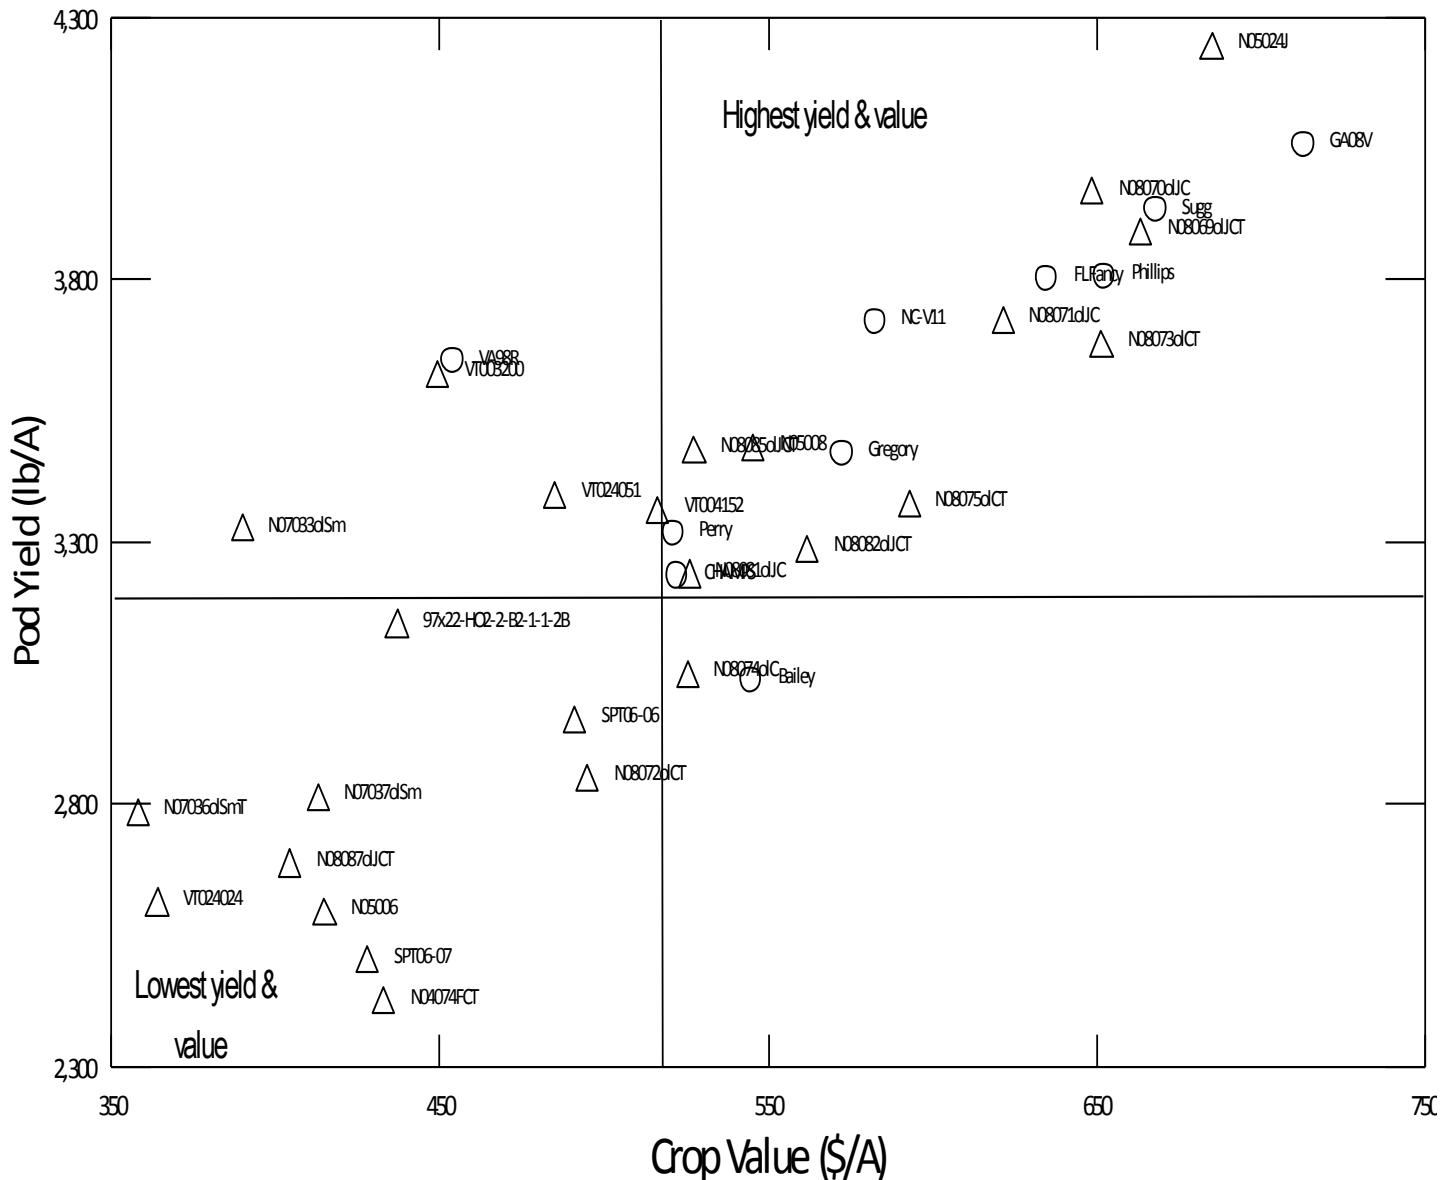

Figure 16. Summary of pod yield and crop value at Southampton Co., VA, in 2010. Vertical bar represents mean crop value and horizontal bar mean pod yield of 36 genotypes. Circles represent commercial varieties, and triangles advanced breeding lines. The right and upper rectangle shows the best genotypes for yield and value at this location and planting time.

2010 Results by Location

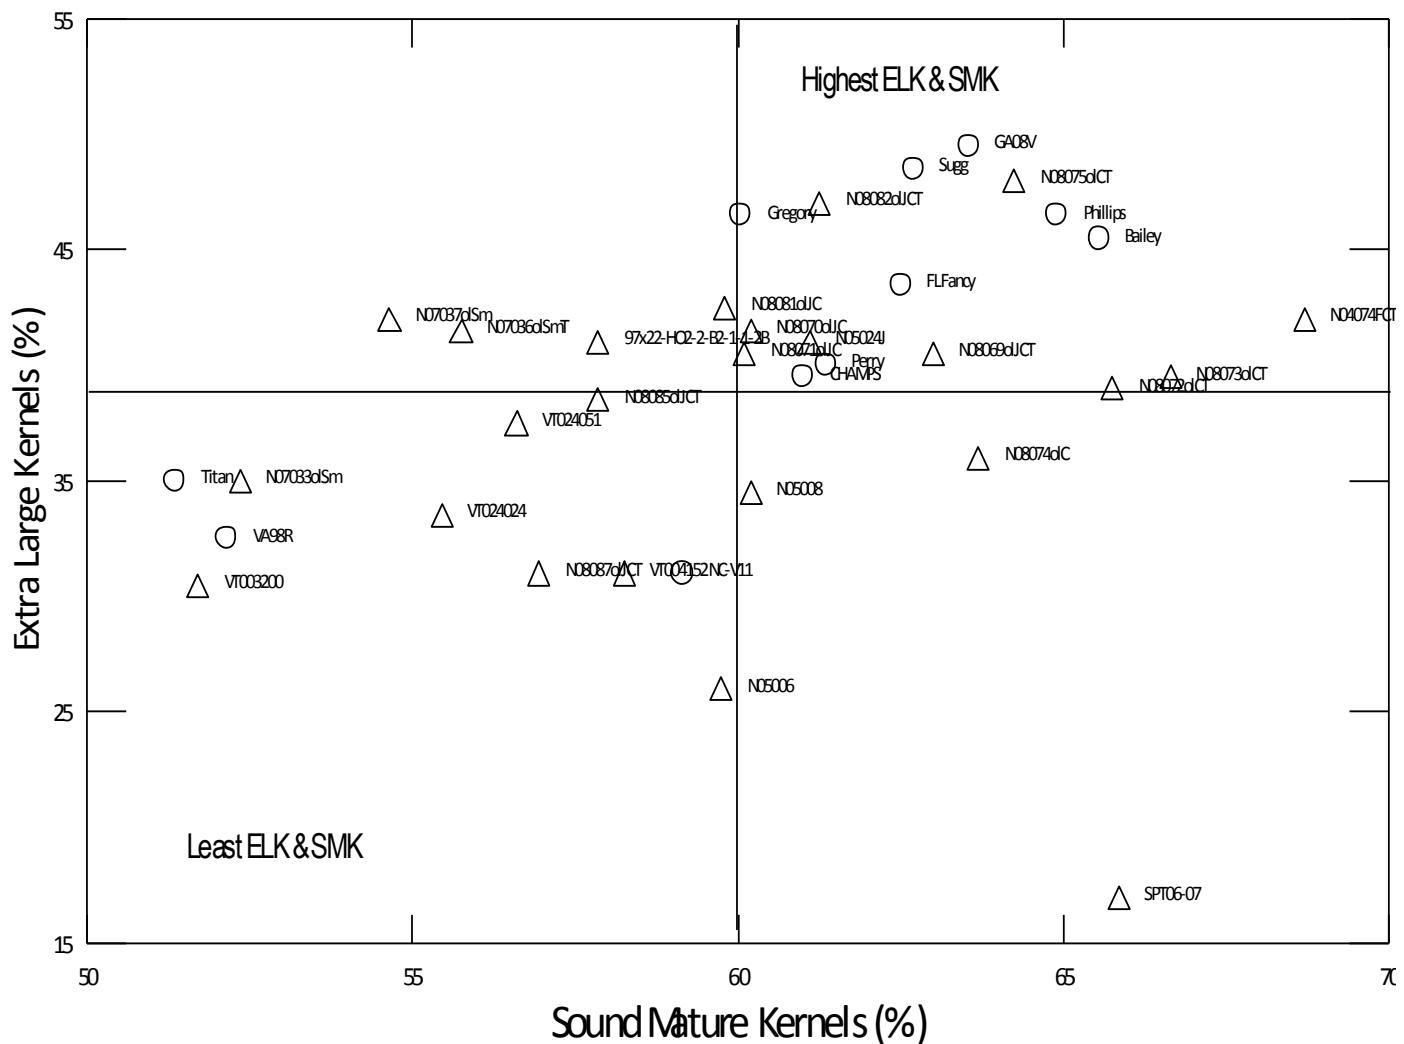

Figure 17. Summary of Extra Large Kernel (ELK) and Sound Mature Kernel (SMK) content at Southampton Co., VA, in 2010. Vertical bar represents mean of the SMK content and horizontal bar mean of the ELK content of 36 genotypes. Circles represent commercial varieties, and triangles advanced breeding lines. The right and upper rectangle shows the best genotypes for ELK and SMK content at this location and planting time.

2010 Results by Location

Table 29. Performance of genotypes at Martin Co., NC, in 2010. Planting Date I averages of three replicated plots planted on 23 April, dug on 11 October, and combined on 18 October.

¹ All yields are net, adjusted to 7% standard moisture and foreign material is deducted.² Means sharing the same letter(s) are not statistically different, at P=0.05 based on the Fisher's protected LSD test.³ Fisher's least significant difference (LSD) at P = 0.05.

2010 Results by Location

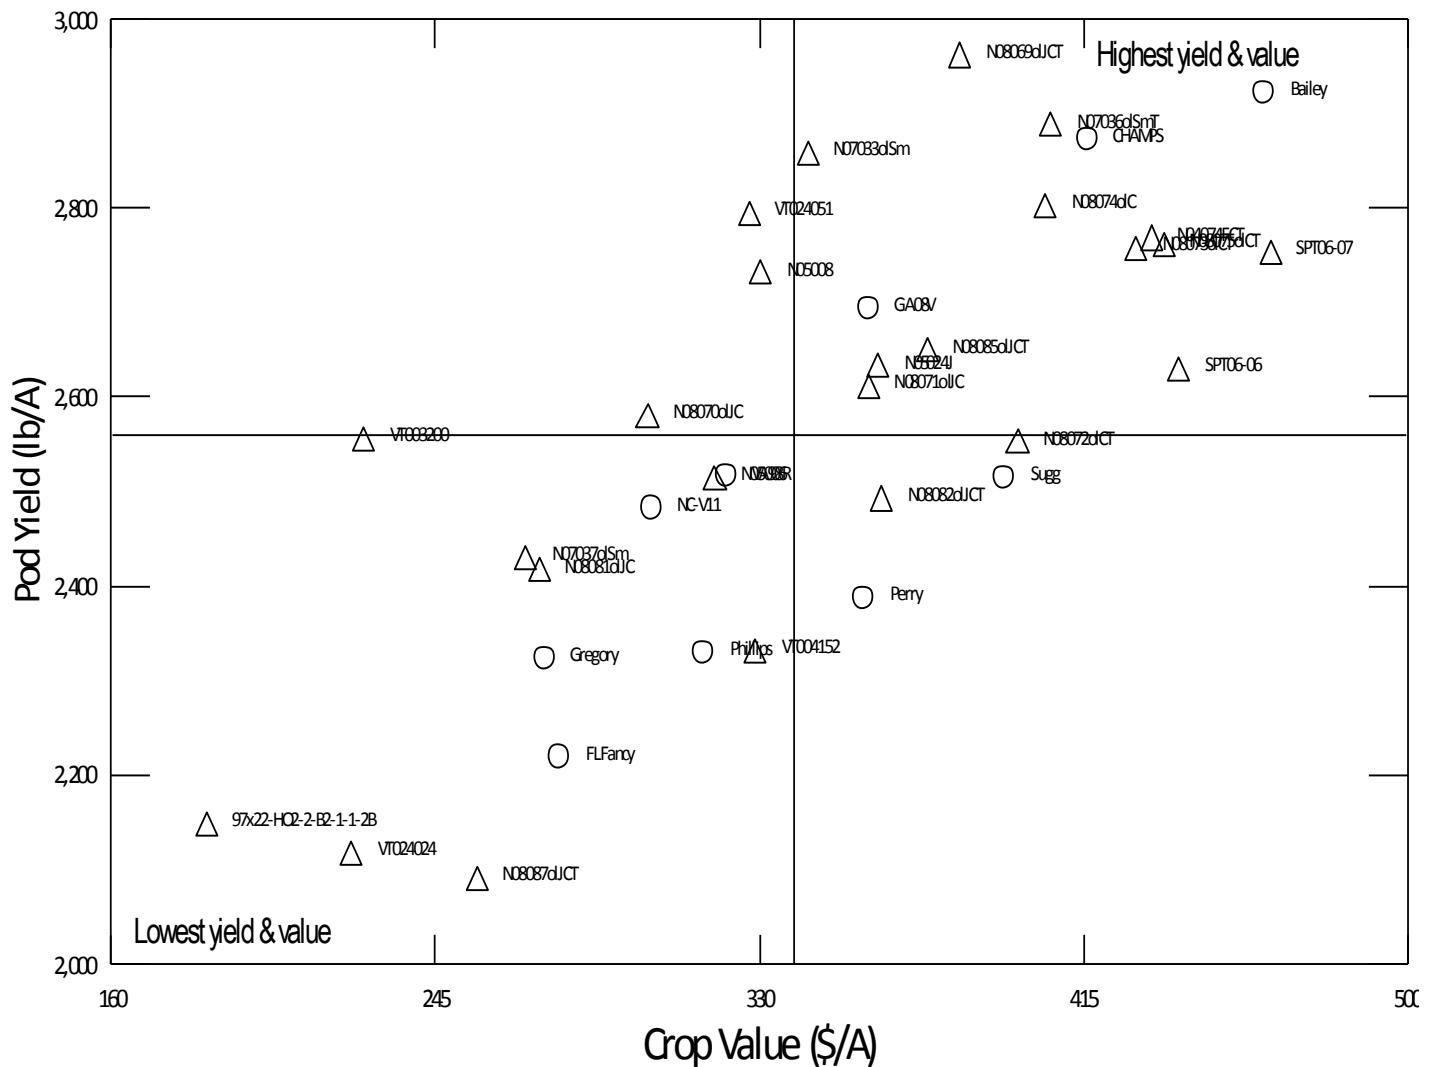

Figure 20. Summary of pod yield and crop value for Planting Date II at Martin Co., NC, in 2010. Vertical bar represents mean crop value and horizontal bar mean pod yield of 36 genotypes. Circles represent commercial varieties, and triangles advanced breeding lines. The right and upper rectangle shows the best genotypes for yield and value at this location and planting time.

2010 Results by Location

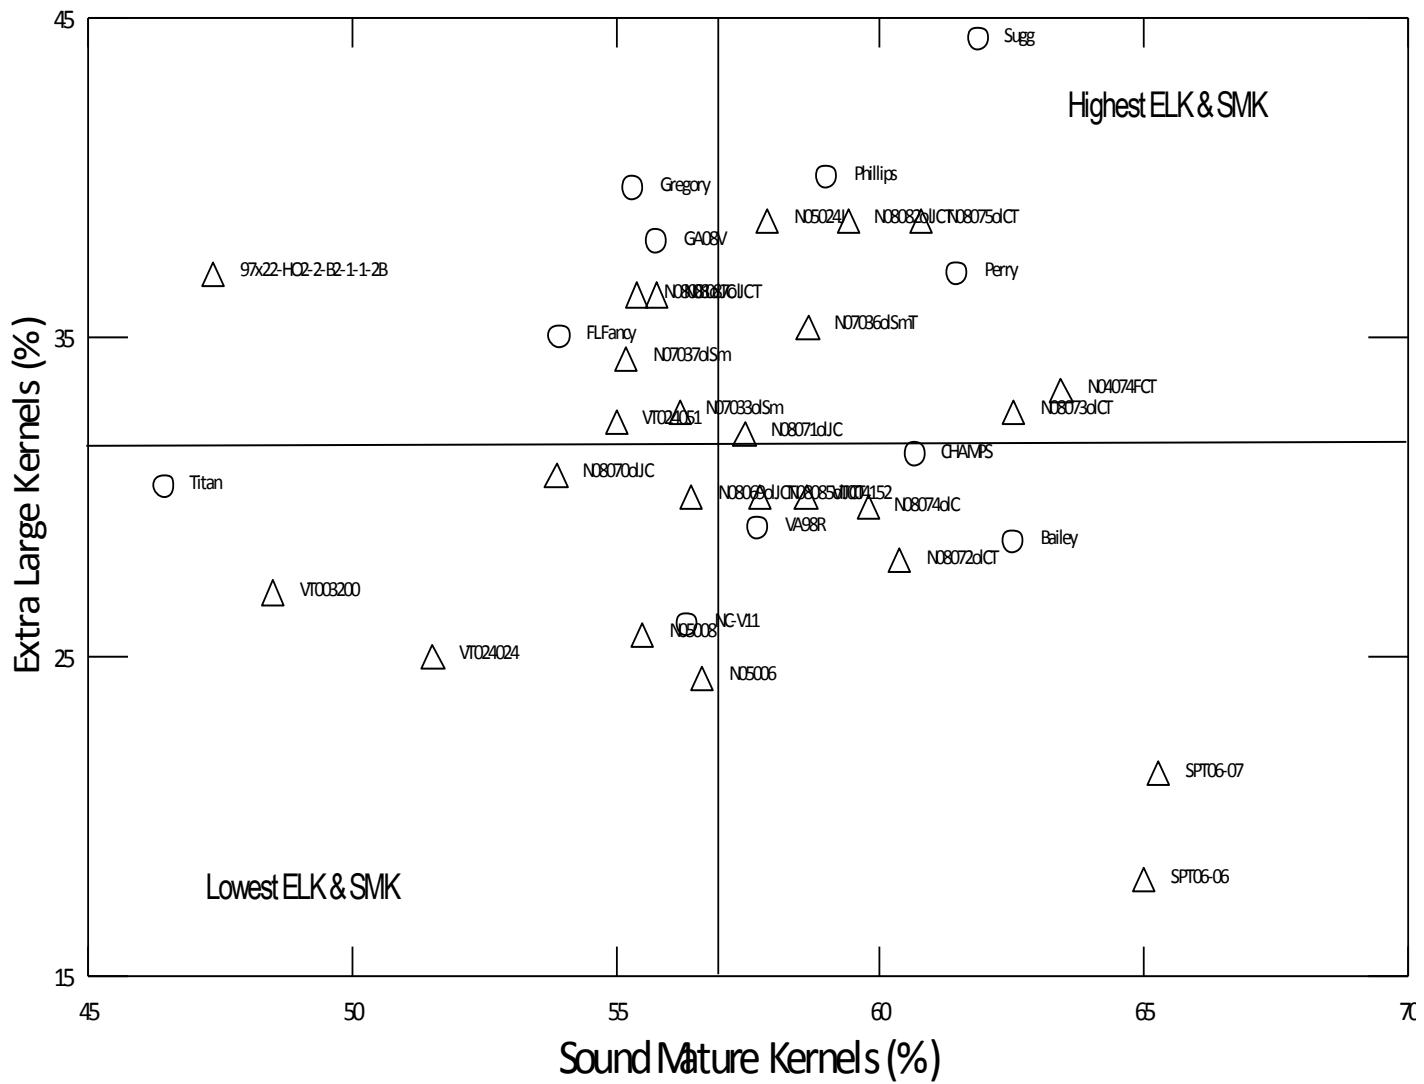

Figure 21. Summary of Extra Large Kernel (ELK) and Sound Mature Kernel (SMK) content for Planting Date II at Martin Co., NC, in 2010. Vertical bar represents mean of the SMK content and horizontal bar mean of the ELK content of 36 genotypes. Circles represent commercial varieties, and triangles advanced breeding lines. The right and upper rectangle shows the best genotypes for ELK and SMK content at this location and planting time.

¹ All yields are net, adjusted to 7% standard moisture and foreign material is deducted.² Means sharing the same letter(s) are not statistically different, at P=0.05 based on the Fisher's protected LSD test.³ Fisher's least significant difference (LSD) at P = 0.05.

2010 Results by Location

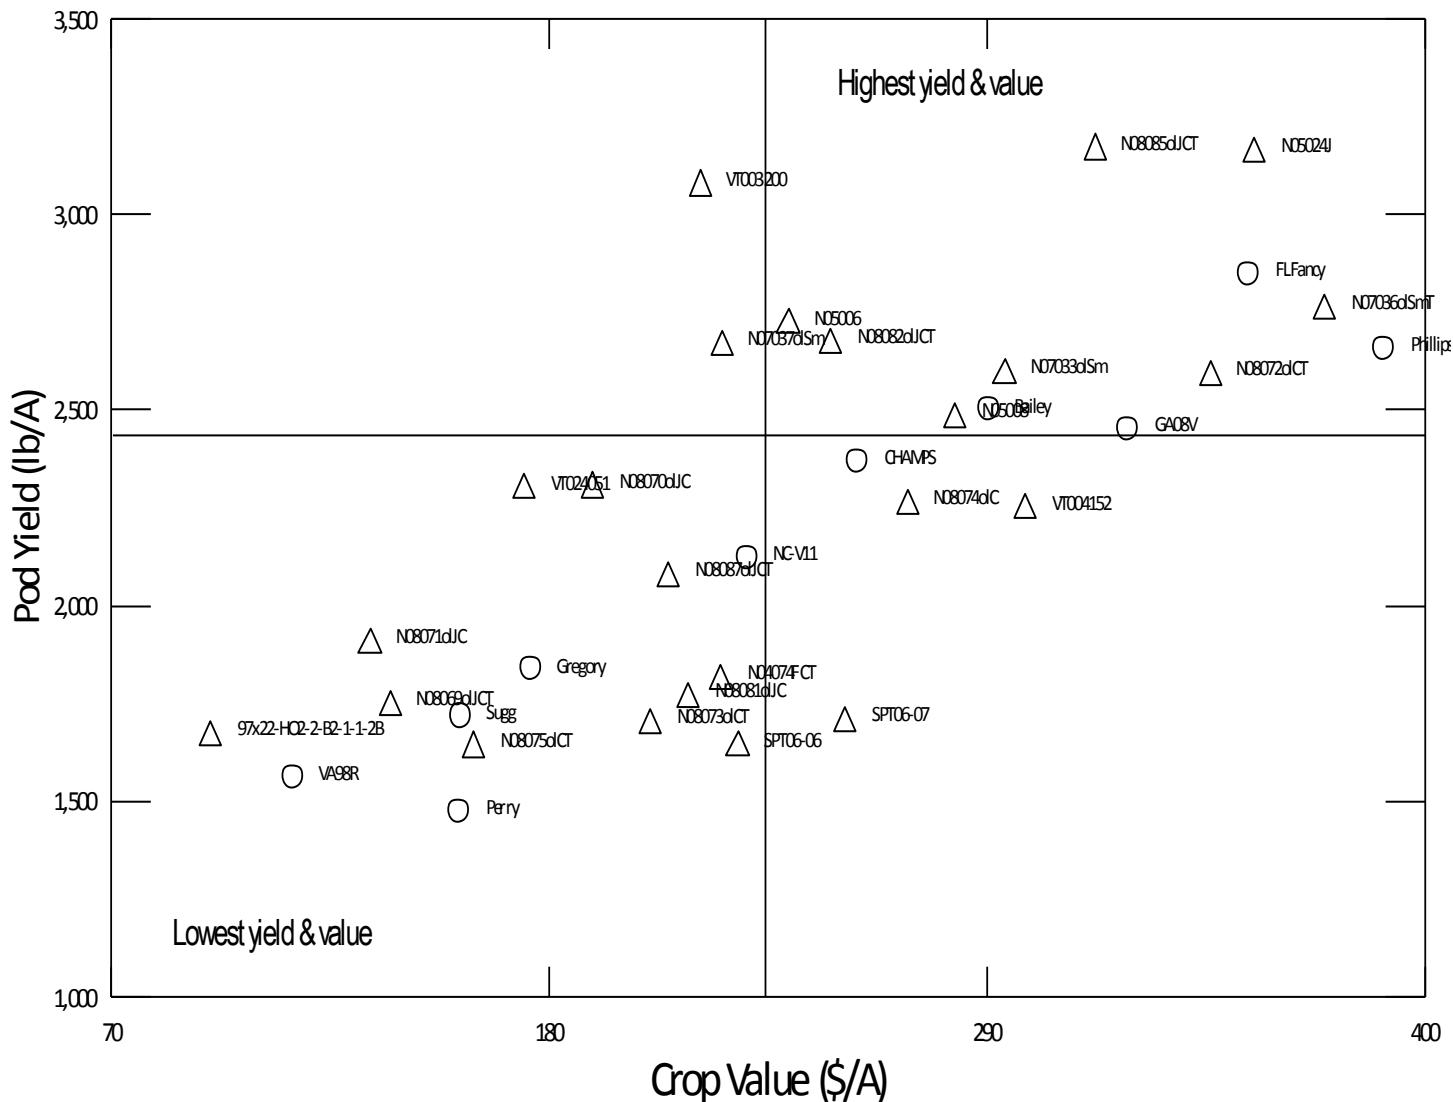

Figure 26. Summary of pod yield and crop value at Florence, SC, in 2010. Vertical bar represents mean crop value and horizontal bar mean pod yield of 36 genotypes. Circles represent commercial varieties, and triangles advanced breeding lines. The right and upper rectangle shows the best genotypes for yield and value at this location and planting time.

2010 Results by Location

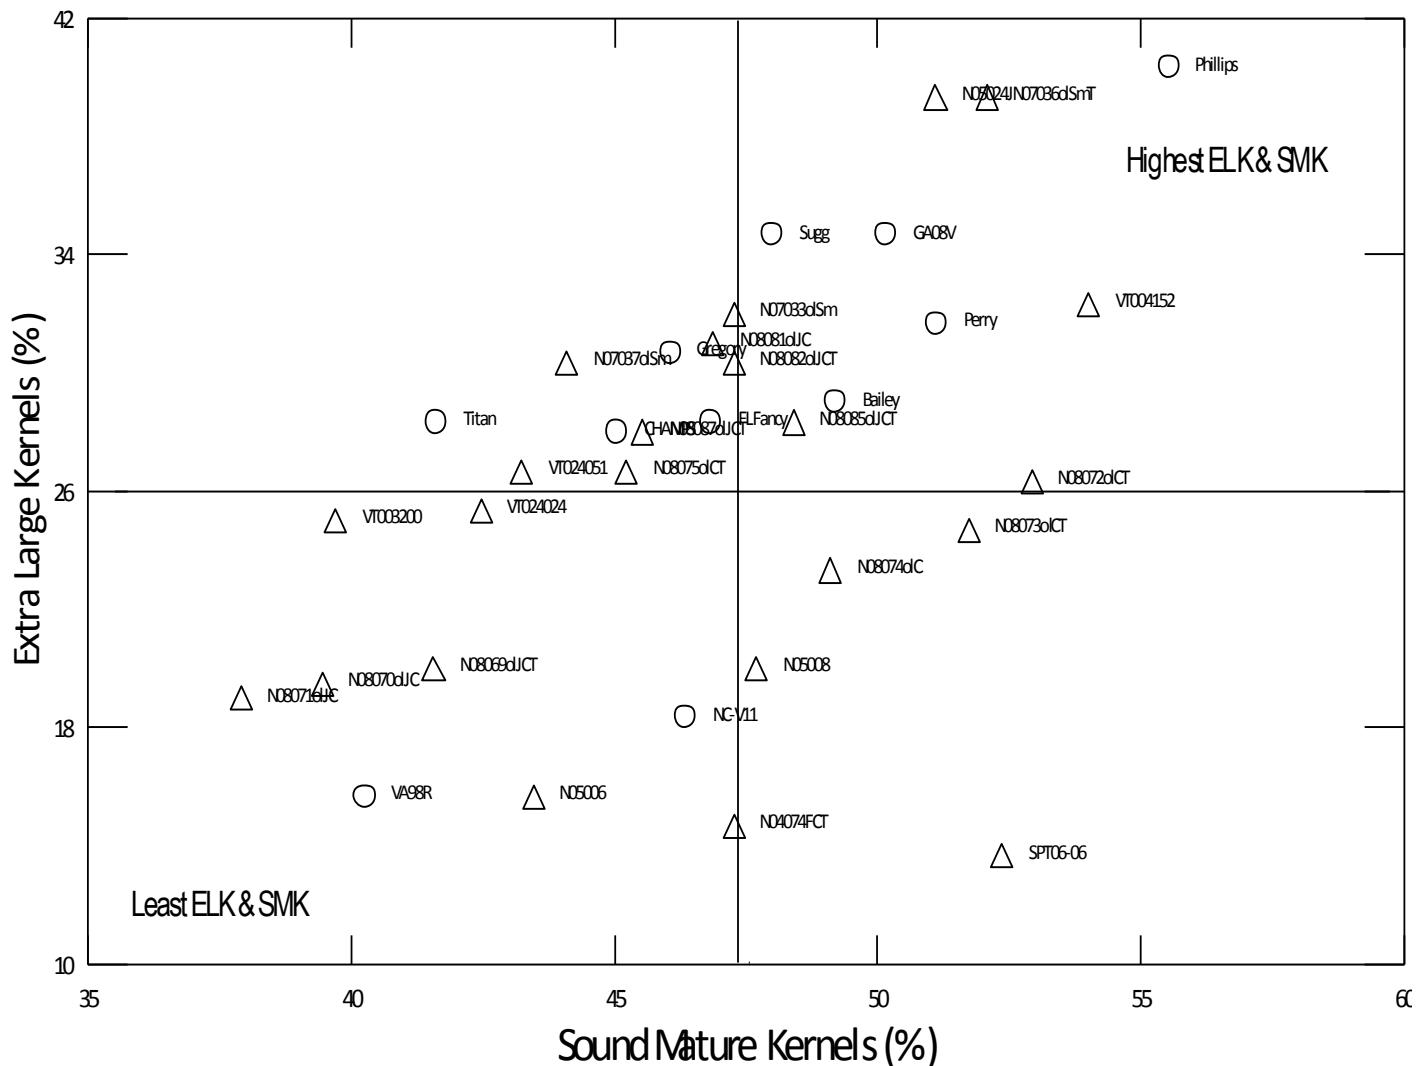

Figure 27. Summary of Extra Large Kernel (ELK) and Sound Mature Kernel (SMK) content at Florence, SC, in 2010. Vertical bar represents mean of the SMK content and horizontal bar mean of the ELK content of 36 genotypes. Circles represent commercial varieties, and triangles represent advanced breeding lines. The right and upper rectangle shows the best genotypes for ELK and SMK content at this location and planting time.

2010 Results across Locations

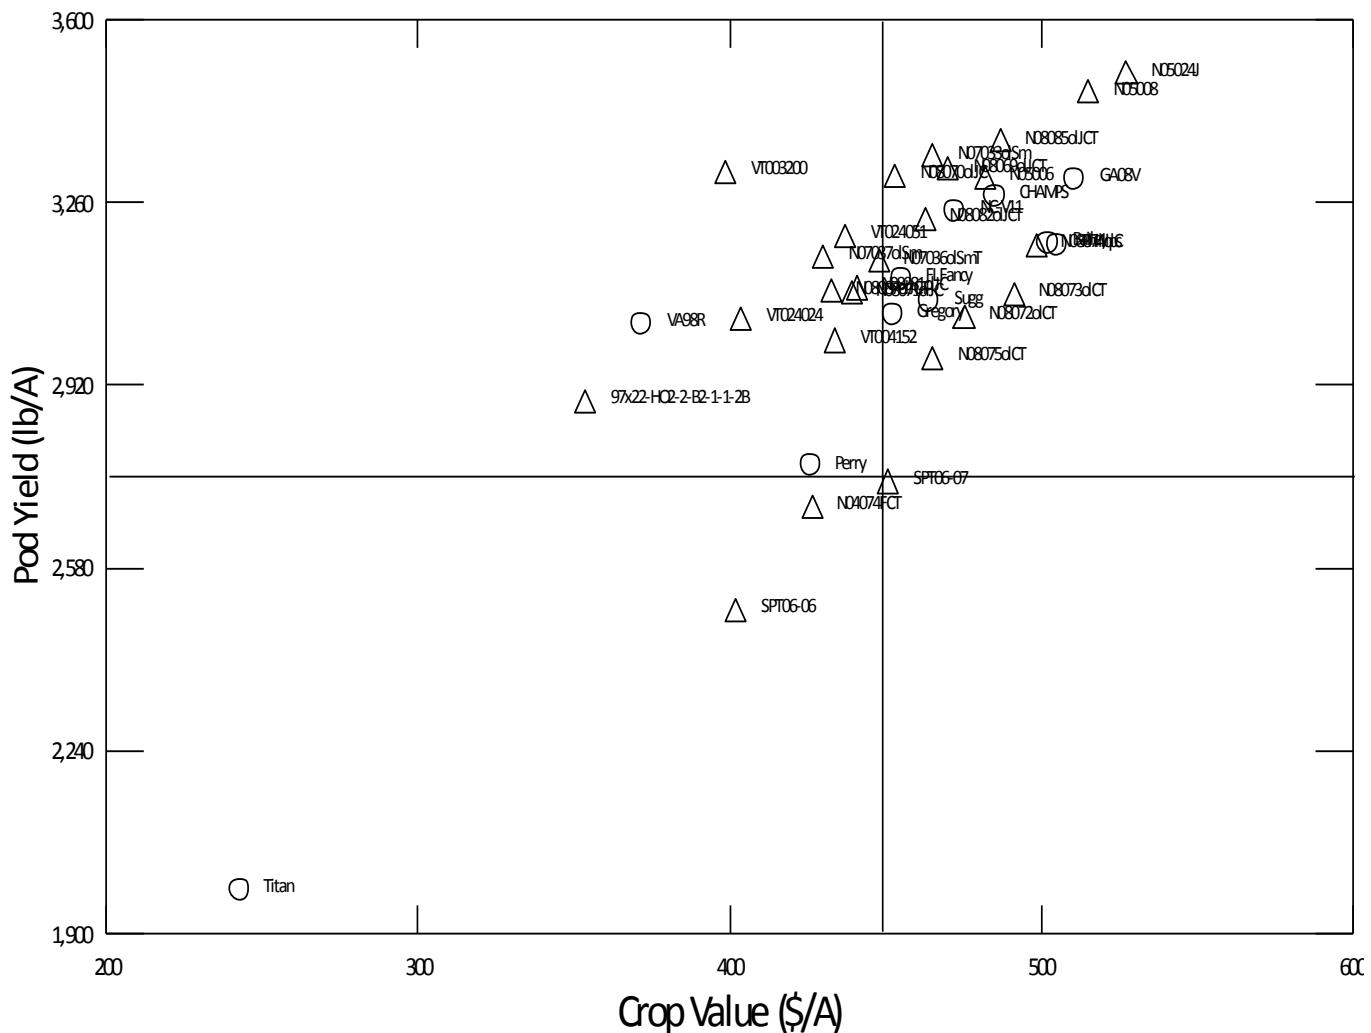

Figure 28. Summary of pod yield and crop value at all locations in 2010. Vertical bar represents mean crop value and horizontal bar mean pod yield of 36 genotypes. Circles represent commercial varieties, and triangles advanced breeding lines. The right and upper rectangle shows the best genotypes for yield and value at all locations and planting times.

2010 Results across Locations

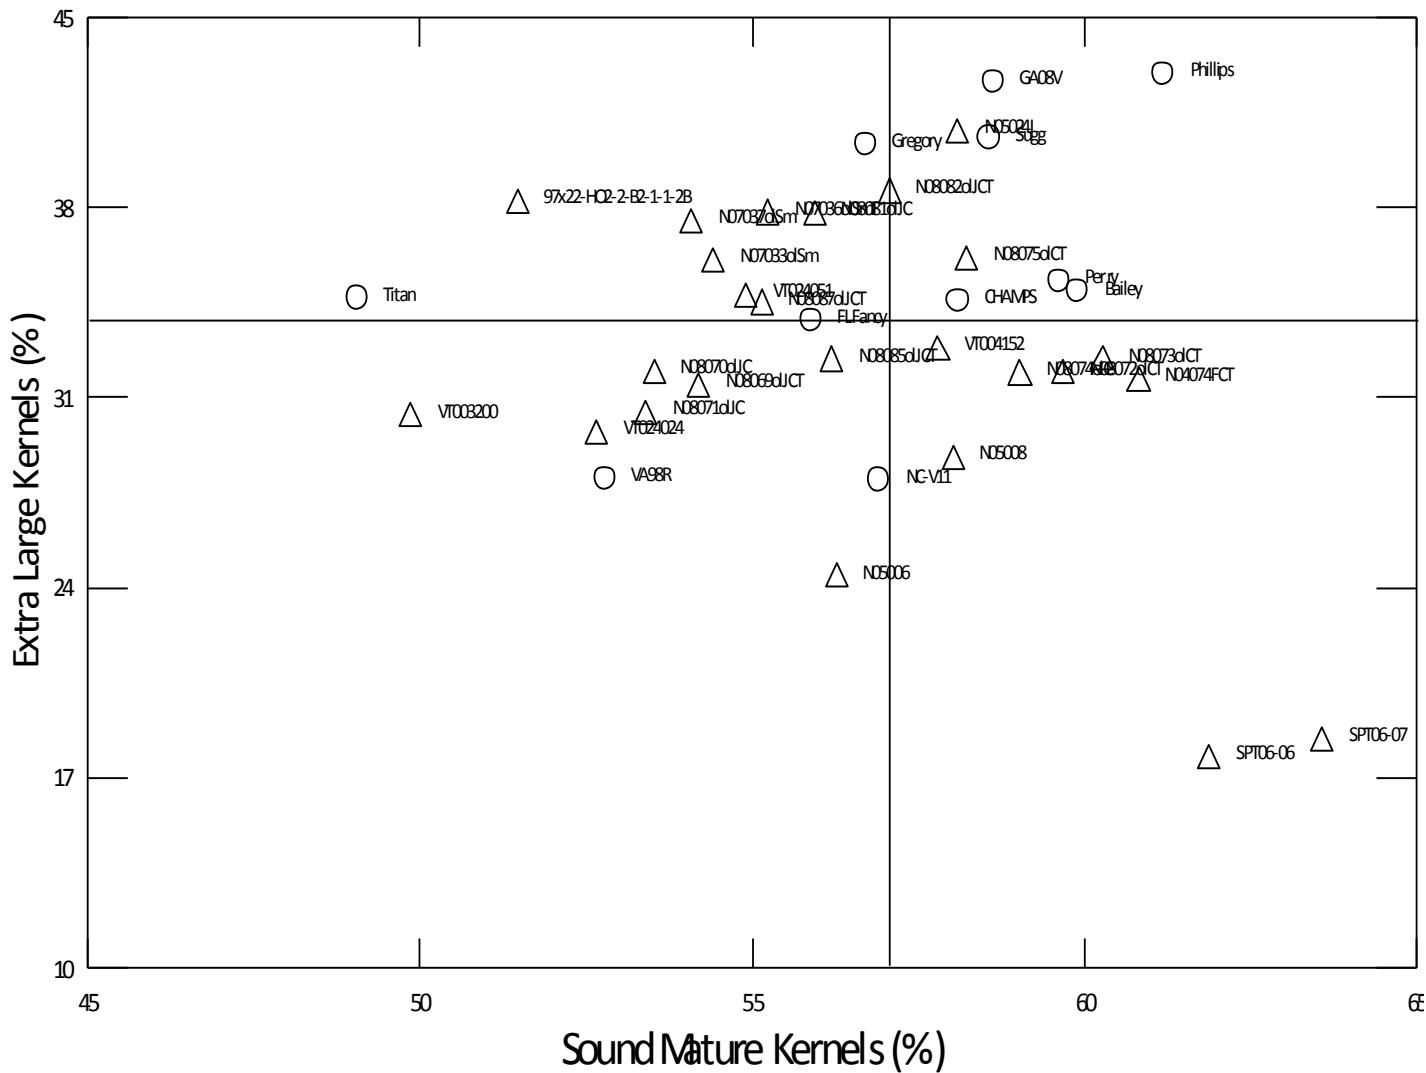

Figure 29. Summary of Extra Large Kernel (ELK) and Sound Mature Kernel (SMK) content at all locations in 2010. Vertical bar represents mean of SMK content and horizontal bar mean of the ELK content of 36 genotypes. Circles represent commercial varieties, and triangles advanced breeding lines. The right and upper rectangle shows the best genotypes for ELK and SMK at all locations and planting times.

2010 Results across Locations

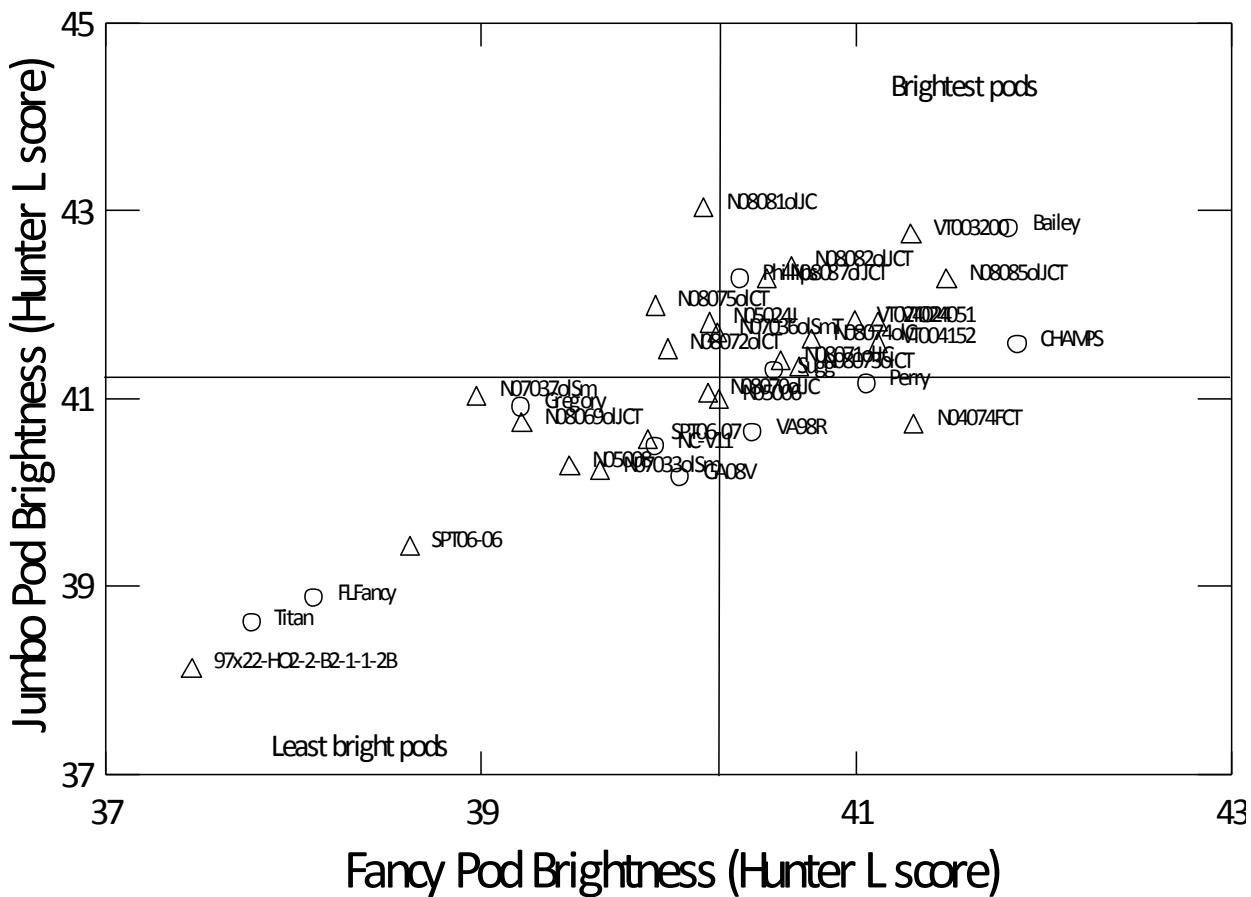

Figure 30. Summary of Brightness of jumbo and fancy pods at all locations in 2010. Circles represent commercial varieties, and triangles advanced breeding lines.
