ACKNOWLEDGEMENTS

FINANCIAL SUPPORT

The authors gratefully acknowledge financial support from the following institutions and organizations:

Virginia Tech
Virginia Agricultural Experiment Station
NC State University
National Peanut Shellers Association
South Carolina Peanut Growers
North Carolina Peanut Growers
Virginia Crop Improvement Association

TECHNICAL SUPPORT

The following agricultural specialists, technicians, and lab assistants are gratefully acknowledged for their professionalism, and dedication to achieve tasks on time and in a collegial manner: Frank Bryant, Carolyn Daughtrey, Barron Grant, Doug Redd, and Amy Taylor.

Carolyn Daughtrey

Frank Bryant

Doug Redd

Amy Taylor

Barron Grant

Doug and Frank

All of the following cooperators are also acknowledged for their various support provided to the PVQE program in 2019.

ABBREVIATIONS

LSK, Loose Shelled Kernels, percent of kernels or portions of kernels free from hulls and scattered throughout the pod sample.

FM, Foreign Material, percent of anything other than mature pods found in the sample, including dirt, vines, sticks, stones, insects, broken shells, and raisins (immature pods with shriveled and shrunken shells that cannot be mechanically shelled).

Moisture, percent kernel moisture at grading, as determined by an electronic moisture meter.

Fancy, percent pods that fell through a 38/64 inch opening but rode a 34/64 inch opening on the pre-sizer.

Jumbo, percent pods that rode the 38/64 inch opening on the pre-sizer.

ELK, Extra Large Kernels, percent kernels which ride a 21.5/64 x 1 inch slotted screen.

SS, Sound Splits, percent split or broken kernels which are not damaged. Portions less than 1/4 of a whole kernel are not included but go into other kernels.

DK, Damaged Kernels, percent moldy and decayed kernels, or with skin and flesh discoloration due to insects and weather damage.

OK, Other Kernels, percent kernels passing through a 15/64 x 1 inch slotted screen. Splits and broken pieces, 1/4 kernel or larger which pass through this screen are considered SS or DK depending upon their condition.

SMK, Sound Mature Kernels, percent whole kernels which ride a 15/64 x 1 inch slotted screen. Splits that ride this screen are included as SS or DK, as the case may be.

TM, Total Kernels, percent all kernels in the shelling sample including SMK, SS, OK, and DK.

Support Price (\$/lb), price based on USDA – FSA formula.

Yield (lb/A), plot weights converted to an acre basis. All yields are adjusted to a standard 7% moisture with FM deducted.

Value (\$/A), crop value computed by the following formula:

$$\text{Value} = (\text{Yield} * \text{Support Price})$$

Introduction

INTRODUCTION

Due to suitability to the environmental conditions and existence of a strong peanut industry tailored to process primarily the large-seeded Virginia-type peanut, growers in Virginia, North Carolina, and South Carolina generally grow Virginia-type cultivars. In the view of a common interest in the Virginia-type peanut, the three states are working together through a multi-state project, the Peanut Variety Quality Evaluation (PVQE), to evaluate advanced breeding lines and commercial cultivars throughout their production regions. The objectives of this project are: 1) to determine yield, grade, quality, and disease response of commercial cultivars and advanced breeding lines at various locations in Virginia and the Carolinas, 2) develop a database for Virginia-type peanut to allow research-based selection of the best genotypes by growers, industry, and the breeding programs, and 3) to identify the most-suited peanut genotypes for various regions that can be developed into varieties. This report contains agronomic and grade data of the PVQE tests in 2019.

TAREC Field Day participants

PVQE Variety trial at TAREC Research Farm

Plant Material and Test Location

PLANT MATERIAL AND TEST LOCATIONS

In 2019, PVQE included 28 genotypes: 6 commercial varieties, including the line N12008olCLSmT released in 2017 as Bailey II, and 22 advanced breeding lines developed by the North Carolina State University and University of Florida/Virginia Tech peanut breeding programs (Table 1). All breeding lines have the ‘high oleic acid’ characteristic and they are marked by ‘ol’ letters in their names; the commercial cultivars are conventional for this trait with the exception of Sullivan and Wynne. Genotypes were planted from May 3 through June 10 at five locations: the Tidewater AREC in Suffolk, VA, Martin Co., NC, the Upper Coastal Plain Research Station (UCPRS) near Rocky Mount, NC, Bladen County, NC, and the Edisto Research and Education Center at Blackville, SC. At Suffolk and Martin two digging dates and two replications within each digging date were planted in a RCBD design. The first digging date was approximately two weeks earlier than the optimum harvest date (the second digging date in this test). This setting allows identification of early maturing varieties. At the UCPRS and Bladen County, only one digging date (optimum) replicated twice at each site was planted. For all locations, cultivars were compared with the breeding lines for yield and grading characteristics, as the ultimate objective is development of improved Virginia-type peanut cultivars.

Plant Material and Test Location

Table 2. Planting, digging and combining dates for each test location in 2019. Dig I was considered an early digging, and Dig II an optimum digging time for peanut in V-C area.

Locations	<u>Planting Date</u>		<u>Digging Date</u>		<u>Harvest Date</u>	
	I	II	I	II	I	II
Tidewater AREC, Suffolk, VA	May 3	May 3	Sept. 17	Oct. 05	Sept. 25	Oct. 11
Martin County, NC	May 14	May 14	Sept. 25	Oct. 3	Oct. 3	Oct. 10
Rocky Mount, NC		May 8		Sept. 26		Oct. 2
Bladen County, NC		June 10		Oct. 16		Oct. 24
Blackville, SC		May 9		Sept. 25		Oct. 3

Weather Conditions

WEATHER CONDITIONS

Weather information is provided in Tables 3 through 6, and Fig. 1.

Table 3. Temperature of air and soil at 4 inches depth, peanut heat units (degree day – DD56) calculated based on a 56 °F temperature base (T_b), and precipitation at Tidewater AREC, Suffolk VA, in 2019 peanut growing season. These data are provided by the Peanut/Cotton InfoNet of Tidewater AREC from 3 May to 5 October.

Month	Avg Air Temp	Max Air Temp	Min Air Temp	Avg Soil Temp	Heat units DD56	Rain
			°F		°F d	inch
May	73	84	62	76	493	3.0
June	75	86	66	79	581	5.6
July	80	91	70	84	732	7.2
August	77	88	68	82	639	7.5
September	74	86	63	78	530	1.6
October	73	86	62	77	86	0.0
Mean/Sum	75	87	65	79	3061	21.8

Table 4. Temperature of air and soil at 4 inches depth, light (photosynthetic active radiation - PAR), air relative humidity (RH), and precipitation at Martin County, NC, in 2019 peanut growing season. These data are provided by the State Climate Office of NC from 14 May to 3 October.

Month	Avg Air Temp	Max Air Temp	Min Air Temp	Avg Soil Temp	Heat units DD56	AVG PAR¹	Max PAR¹	RH	Rain
			°F		(°F d)	μmol m ⁻² s ⁻¹	(%)	(inch)	
May	76	88	64	77	356	583	2110	70	0.9
June	76	86	66	79	604	501	2191	71	5.5
July	79	91	70	83	753	538	2110	76	7.5
August	77	87	69	82	694	443	2033	76	10.1
September	75	86	66	79	595	376	1769	73	7.3
October	77	91	67	78	67	348	1347	73	0.0
Mean/Sum	77	88	67	80	3070	477	2023	72	31.3

¹ Light is important for peanut growth and development. On a fully sunny day, maximum PAR approaches 2500 μmol m⁻² s⁻¹ and average PAR (average from sunrise to sunset) is approximately 600 μmol m⁻² s⁻¹. If these numbers are less, it denotes cloudy days, on which plants grow less.

Weather Conditions

Table 5. Temperature of air and soil at 4 inches depth, peanut heat units (degree day – DD56) calculated based on a 56 °F temperature base (T_b), light (photosynthetic active radiation – PAR), air relative humidity (RH), and precipitation at Rocky Mount, NC, in 2019 peanut growing season. These data are provided by the State Climate Office of NC from 8 May to 26 September.

Month	Avg Air Temp	Max Air Temp	Min Air Temp	Avg Soil Temp	Heat units DD56	Avg PAR ¹	Max PAR ¹	RH	Rain
May	75	87	63	79	455	556	2156	62	2.3
June	76	86	67	80	606	526	2281	71	3.8
July	81	93	71	86	791	558	2160	69	2.5
August	77	88	69	82	703	455	2098	75	6.5
September	74	86	65	79	508	410	1814	76	5.5
Mean/Sum	77	88	67	81	3062	501	2108	71	20.5

¹ Light is important for peanut growth and development. On a fully sunny day, maximum PAR approaches 2500 $\mu\text{mol m}^{-2} \text{s}^{-1}$ and average PAR (average from sunrise to sunset) is approximately 600 $\mu\text{mol m}^{-2} \text{s}^{-1}$. If these numbers are less, it denotes 6.6 cloudy days, on which plants grow less.

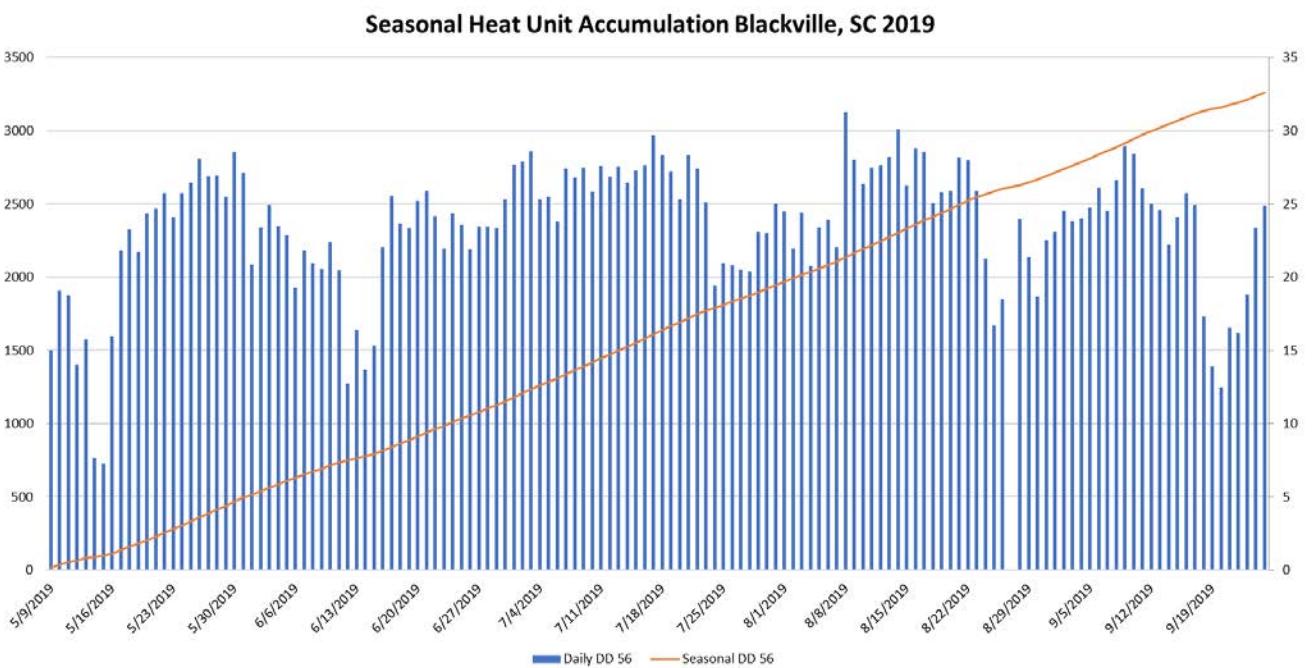

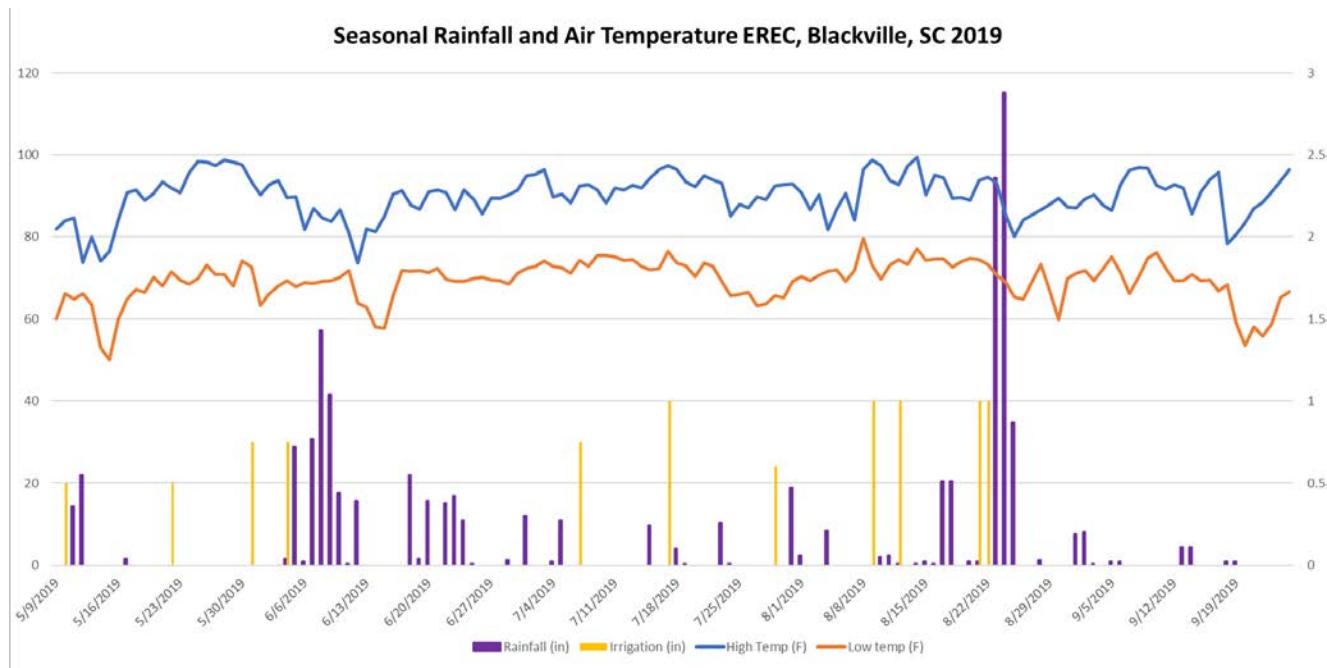

Table 6. Temperature of air and soil at 4 inches depth, peanut heat units (degree day – DD56) calculated based on a 56 °F temperature base (T_b), light (photosynthetic active radiation – PAR), air relative humidity (RH), and precipitation at Bladen County, NC, in 2019 peanut growing season. These data are provided by the State Climate Office of NC from 10 June to 16 October.

Month	Avg Air Temp	Max Air Temp	Min Air Temp	Avg Soil Temp	Heat units DD56	Avg PAR ¹	Max PAR ¹	RH	Rain
June	77	88	68	79	459	549	2240	72	0.0
July	80	92	71	81	780	551	2308	75	4.3
August	78	89	70	81	736	466	2190	80	4.7
September	76	88	66	79	629	440	1833	78	5.5
October	70	82	60	74	23	327	1807	75	1.9
Mean/Sum	77	88	68	79	2627	477	2096	76	16.4

¹ Light is important for peanut growth and development. On a fully sunny day, maximum PAR approaches 2500 $\mu\text{mol m}^{-2} \text{s}^{-1}$ and average PAR (average from sunrise to sunset) is approximately 600 $\mu\text{mol m}^{-2} \text{s}^{-1}$. If these numbers are less, it denotes cloudy days, on which plants grow less.

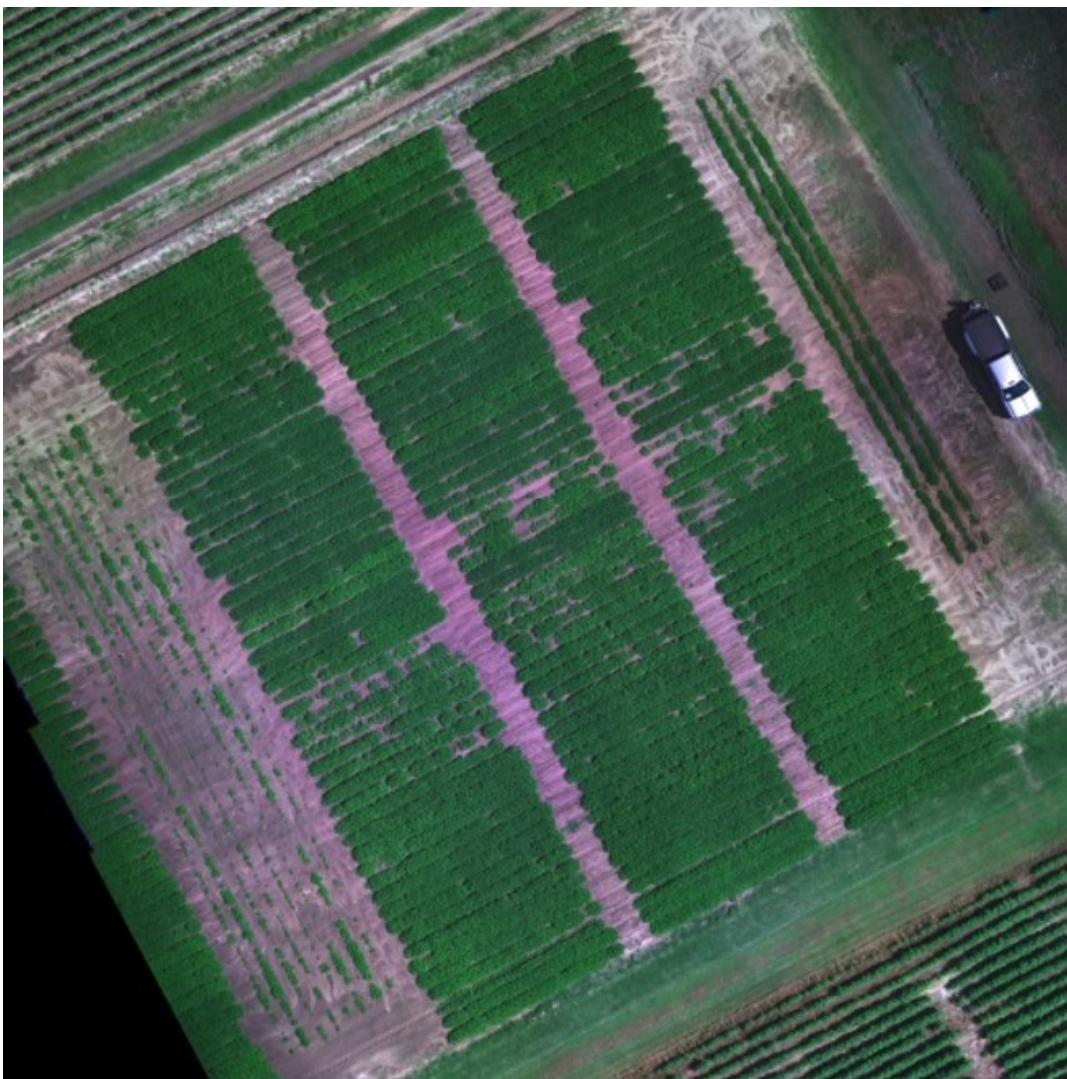

Weather Conditions

Figure 1. Temperature of air, peanut heat units (degree day – DD56) calculated based on a 56 °F temperature base (T_b), and precipitation at Blackville, SC, in 2019 peanut growing season. These data are from 9 May to 25 September.

CULTURAL PRACTICES

Cultural practices were performed according to VA, NC and SC recommendations. Plots were 35 ft rows planted on 36-inch centers (3-6 seed/row ft) with a two-row planter. All plots were dug with a KMC 2-row Planting Digger, and combined with a 2-row Hobbs peanut picker, model 325A, equipped with a bagging attachment. Tables 7 through 11 show planting dates, soil type, pH and mineral content, and cultural practices applied to the crops at each location.

Aerial picture of a peanut field at the Virginia Tech Tidewater AREC station in Suffolk VA , taken in July 2019 using a DJI M200 V2 Tetracopter with a MicaSense Altum camera

2019 Results by Location

RESULTS

After harvest, yield and farmer-stock grade factors including percentages of jumbo and fancy pods, pod brightness, foreign material (%FM), loose shelled kernels (%LSK), % jumbo and fancy pods, extra large kernels (%ELK), sound mature kernels (%SMK), sound splits (%SS), other kernels (%OK), damaged kernels (%DK), and pod brightness (Hunter L score) for jumbo and fancy pods were measured. Pod yield was adjusted for 7% kernel moisture and price per pound calculated by the federal formulas. Crop value per acre was also computed. The results are presented in tables 12 to 23 for individual locations and all locations combined. Two- and three-year averages are presented in Tables 24-35. Data is also presented in tables 37-39 for peanuts grown under drought conditions in rain shelters at the TAREC in Suffolk VA. This data includes names and pedigrees of the genotypes (advanced breeding lines and commercial varieties) evaluated, content of jumbo and fancy pods and pod brightness (Hunter L Score) on rain shelter stock grades, and grade characteristics, yield, and value of genotypes in 2019.

Dr. Maria Balota explaining peanut research at the Peanut Field Tour on July 29, 2019.

¹ Pods that rode a 38/64 inch opening on the pre-sizer.² Pods that fell through a 38/64 inch opening but rode a 34/64 inch opening on the pre-sizer.³The higher the number, the brighter the pod.⁴ Means sharing the same letter(s) are not statistically different, at P=0.05 based on the Fisher's LSD test.

2019 Results for Rain Shelter Trial

Table 39. Performance of genotypes at TAREC Suffolk Rain Shelters in 2019.
