Virginia Tech does not discriminate against employees, students, or applicants on the basis of race, color, sex, disability, age, veteran status, national origin, religion, sexual orientation, or political affiliation. Anyone having questions concerning discrimination or accessibility should contact the Equal Opportunity/Affirmative Action Office.

## **ACKNOWLEDGEMENTS**

### **FINANCIAL SUPPORT**

The authors gratefully acknowledge financial support from the following institutions and organizations:

Virginia Tech

Virginia Agricultural Experiment Station

NC State University

National Peanut Shellers Association

South Carolina Peanut Growers

North Carolina Peanut Growers

Virginia Crop Improvement Association

## TECHNICAL SUPPORT

The following agricultural specialists, technicians, and lab assistants are gratefully acknowledged for their professionalism, and dedication to achieve tasks on time and in a collegial manner: Frank Bryant, Carolyn Daughtrey, Doug Redd, Amy Taylor, Barron Grant.

Carolyn Daughtrey

Frank Bryant

Doug Redd

Amy Taylor

Barron Grant

Doug and Frank

All of the following cooperators are also acknowledged for their various support provided to the PVQE program in 2019.

### **LIST OF COOPERATORS**

Virginia Tech, Virginia Agricultural Experiment Station, and VCIA

- Mr. K. Jones, Farm Manager, Tidewater AREC
- Mr. B. Slye, Assistant Farm Manager, Tidewater AREC
- Mr. P. Browning, VCIA
- Mr. T. Hardiman, VCIA

Other universities

- Dr. J. Dunne, NCSU
- Dr. D. Anco, Clemson
- Dr. B. Tillman, University of Florida
- Mr. C. Bogle, Upper Coastal Plain Research Station, NCSU

Growers

- Mr. T. Slade, Martin Co., NC
- Mr. D. McDuffie, Bladen Co., NC

County Agents

- Ms. L. Preisser, Isle of Wight Co., VA
- Mr. S. Reiter, Prince George Co., VA
- Mr. M. Parrish, Dinwiddie Co., VA
- Ms. E. Pittman, Suffolk Co. VA
- Ms. S. Rutherford, Greensville Co. VA
- Mr. J. Holland, Southampton Co., VA
- Mr. L. Grimes, Martin Co., NC

Commodity Groups

- Mr. D. Cotton, Virginia Peanut Board
- Mr. B. Sutter, North Carolina Peanut Board
- Ms. M. Copelan, South Carolina Peanut Board

Companies

- Mr. M. Simmons, Birdsong Peanut
- Mr. K. Bennett, Birdsong Peanut
- Mr. J. Laine, Wakefield Peanut Company
- Mr. B. Gwaltney, Indika Farms, Inc.

Amadas Industries

## Introduction

### INTRODUCTION

Along with agronomic and grade information, data on kernel and pod quality are essential for release of new peanut cultivars to ensure acceptability by the entire peanut trade. The present report contains the quality data collected on 6 Virginia-type cultivars that currently are on the market and 22 advanced breeding lines tested in the Peanut Variety and Quality Evaluation (PVQE) small plots in 2019. The small PVQE plots with 28 varieties were tested at five locations in Virginia, North Carolina, and South Carolina: Suffolk, VA, Martin Co., NC, Rocky Mount, NC, Bladen Co., NC, and Blackville, SC. At Suffolk, VA and at Martin Co., NC, two digs were achieved. For the other locations, only one dig was tested. Each genotype was replicated 2 times at each location and digging date. Varieties' names and pedigree are presented in Table 1. Since none of the advanced breeding lines were proposed for release, PVQE seed increase plots were not planted in 2019. A detailed description of the plant material, test locations, weather conditions, and cultural practices is included in the PVQE 2019 Results. I. Agronomic and Grade Data, at <https://www.pubs.ext.vt.edu/SPES/SPES-93/SPES-93.html>.

### 2019 SMALL PLOT TESTS

Blanching evaluations were determined by a laboratory sample blancher of two, 250 g peanut samples from two dig dates at Martin Co., NC, and the Tidewater AREC. Tables 2 through 19 contain blanching data for the extra-large kernels (ELK) and medium-size kernels. Statistical analyses were determined for percentage of splits, whole blanched, not blanched, and partially blanched.

## Small Plot Tests

Fatty acid content and composition of the sound mature kernels (SMK) was determined by gas chromatography and expressed as % from total seed oil content. Iodine value, oleic/linoleic (O/L) ratio, % total saturated, polyunsaturated/saturated (P/S) ratio, and % total long chain-saturated acids were also calculated using the following formulas:

$$\text{Iodine Value} = (\% \text{ oleic}) (0.8601) + (\% \text{ linoleic}) (1.7321) + (\% \text{ eicosenoic}) (0.7854)$$

$$\text{Oleic/Linoleic (O/L) ratio} = \% \text{ oleic} / \% \text{ linoleic}$$

$$\% \text{ Total Saturated} = \% \text{ palmitic} + \% \text{ stearic} + \% \text{ arachidic} + \% \text{ behenic} + \% \text{ lignoceric}$$

$$\text{Polyunsaturated/Saturated (P/S) ratio} = \% \text{ polyunsaturated (linoleic)} / \% \text{ total saturated}$$

$$\% \text{ Total Long Chain Saturated} = \% \text{ arachidic} + \% \text{ behenic} + \% \text{ lignoceric}$$

The definition of a high oleic peanut is a peanut line and seed that has an oleic acid content of from about 74% to about 84% and a linoleic acid content of from about 2% to about 8%, each based upon the total fatty acid content of the seed, and a ratio of the amount of oleic acid to linoleic acid in the seed of from about 9:1 to about 42:1.

Fatty acid composition is reported from all 2019 PVQE locations and digging dates in Tables 20 through 28. Table 29 shows the content of the fatty acids averaged across all locations in 2019. Two- and three-year averages are included in Tables 30 and 31. Finally, fatty acid composition of 14 cultivars and breeding lines exposed to soil water deficit stress is reported in Table 32.

### **Statistics:**

Analysis of Variance was run for the cultivars and breeding lines on individual digging dates and locations, and averaged digging dates, locations, and years. When significant differences between cultivars and lines were detected, means were compared by the Fisher's LSD test and the minimum significant difference was included in the tables. These values were used to compare the varieties.

## Blanching Results

<sup>1</sup> Refer to page 3 for an explanation of the computations of these characters.

<sup>2</sup> Minimum significant difference at P=0.05, based on the Fisher LSD test.

<sup>3</sup> Lower iodine value indicates longer shelf life.

<sup>4</sup> Higher O/L ratio indicates longer shelf life.
